

Group and ACL Analysis & Visualization, Automatic Database Deployment

Group and Database ACL Analysis

- **Interactively visualize relationships** between groups and nested groups
- **See/sort all database ACLs** listed by entry, replica id, server, URL or ACL hash (equal ACLs)
- **Display the effective access** a users has to any/all databases
- **Gain insight into group memberships** based on Multi-purpose, Mail Only, and ACL Only
- **Easily cope with HR changes** and duplicate or revoke user access across groups and ACLs

Facts and Architecture

- IBM Lotus Notes database template with background agent
- Runs on **Windows, Citrix, Linux and Mac OS** without server tasks
- Very fast scanning of ACLs and resolution of groups and nested groups
- **Supports directory assistance and wildcard members** such as */OU=Legal/O=ACME

Security Audits

- **Identify security and e.g. Mail Only groups**
- **Detect and list unknown entries** across the board
- **Evaluate ACL problems** caused by unexpected group memberships
