

# Installation

## STEP 1

[Download](#) and unzip the .sh file. Use an FTP client (WinSCP, FileZilla etc.) to upload the data-miner-installer.sh file to the /tmp directory of the appliance.  
**FTP user: root, password: config**

## STEP 2

Make the file executable by entering the following command:  
"chmod 755 /tmp/data-miner-installer.sh"

**SSH user: root, password: config**

## STEP 3

Run the installer by entering  
"/tmp/data-miner-installer.sh"

## STEP 4

After the installer script has finished, you can access DataMiner by appending "/dm" to the product URL.  
For example: <https://ApplicationInsights-IP/dm>
