<b>IMPORTANT NOTES</b>	This release contains <b>select important updates highlighted in red</b>
Configuration Database	
FIX	In the Replicator Page (System) action the option "Roaming Entries" is now limited to DLLs >= 5.0.24. This is to prevent a bug from occurring which sometimes leads to a Notes client hang.
FIX	Fixed a bug where the IBM Cloud Onboarding for Mail Selective action would switch to another form after the first time it is saved.
FIX	Fixed a bug where an action button for Cloud Onboarding would show up in the wrong places

FIX (5.0.23)	Fixed an issue where on premise mail file detection didn't consider info from current location.
FIX (5.0.24)	<b>Fixed an issue where managing (create and remove) the replicator page entries for roaming databases causes the client to hang sometimes.</b>
FIX / CHANGE (5.0.24)	Added a new INI variable: ini:MC_DoNotLoadForProcesses It allows to specify a list of notes processes where the MarvelClient DLL will not be loaded.  Example: MC_DoNotLoadForProcesses=ntspk32.exe,othertool.exe  This helps with an issue where the DLL update action does not work because some other Notes process has loaded the DLL in a way that locks the file (and prevents MC from replacing it with a newer version)
