

Release Notes v2.5.2

Release Notes - GreenLight - Version 2.5.2

Improvements

Charting

- Pie charts are now available as a new chart type. More configuration options for this chart type will be added in upcoming versions.

Monitoring

- BES Sensor: added configuration option for measurement timeout (previously a timeout of 60 seconds was set).

Bugfixes

Monitoring

- Sensor Configuration: in certain situations, a sensor rename would result in temporary inaccessibility of collected data
- Decimal Separator Configuration: the logic to validate separator changes has been improved
- Disk Statistics Sensor: in certain situations this sensor would not be able to retrieve any data due to an error while retrieving transaction log information

Live Monitor

- Health Grid: Double clicking a server could sometimes result in an exception thrown by the flash plugin
