

Release Notes 2008-08-11

Config db ntf: 20080811172500
 Analyze db ntf: 20080811172500
 Windows Version: 1.5.3.218 :: MAC OS X Version: :: Linux Version:
 Eclipse Plugin:

Major Improvements: Print statements in Agents are now also inhaled into log.xml, various fixes, desktop8.ndk support

Configuration Database	
FIX	In Notes releases < 7.0.2 / Version 265, values entered into fields were lost when switching between the "What"/"When"/"Who" tabs at the top of the form (suitcase/doc&clock/people icons)
FIX	The Javascript section in ECL actions has been adjusted to now display nicely (much smaller columns previously)
FIX	The bookmark-title in the property section of bookmark actions has been fixed to also support references, such as, for example, <user: WSPBMTtitle>
FIX	Added a "compose INI Filter" button to both the backup and the roaming/rollback action
FIX / CHANGE	When creating a roaming/rollback action from a Notes/Domino database with "before login" as run type, the runtime is now changed automatically to "after login - before sync"
CHANGE	
ENHANCEMENT	Added new positioning options into desktop icon actions for unstacked desktop
ENHANCEMENT	Added new Desktop/Workspace config option to manage + Show Unread + Show Server Names + Stack/Unstack Desktop/Workspace
ENHANCEMENT	Added "Set all change options to 0/1 (never/once)" and "... 8 (always)" buttons to location and connection actions
ENHANCEMENT	Online update now properly detects whether downloads result in HTTP_STATUS 200 (=OK) or 404 (=Error)
ENHANCEMENT	Added option in Zip/Unzip settings to optionally replace dots (.) in filenames with underscores (_) before appending ".zip".
ENHANCEMENT	Added new "File Deployment" action
Analyze Database	
FIX / CHANGE	Detailed Audit data is now split into more documents than in previous releases to ensure proper display in views where the result of multiple concatenated list-fields was previously > 64K.
FIX / CHANGE	The views "local databases by ..." now also display the ODS version in every category
ENHANCEMENT	Added a help button to the (topmost) view "Users by State & UplKey" to display version information
.DLL Updates (Windows)	
FIX	DLL now also runs on Windows NT4
FIX	Unstacked Desktops are now fully supported Added new Desktop/Workspace config option (see configuration database)

FIX	Fixed a problem with an RSOD (red screen of death) with a roaming/rollback action using a Notes/Domino database as source before login RSOD occurred only when the affected user did not enter his/her password; apart from the fact, that roaming/rollback from a Notes/Domino database is not a good idea before login;
FIX	Previous releases did not update the fields Schedule and Schedule_HI in Location documents (=timespans within which to replicate in background)
FIX	Fixed a problem where Drag&Drop of folders to notes did not work with Zip licensed&enabled if the foldername contained dots (.)
FIX	Fixed a bug in execution control where ANY-OF conditions did not work properly: instead of "at least one must be true" it checked for "at least one must be false"
FIX	Setting config values (INI, mc:, user:) previously failed with values containing one or more commas (,), e.g. when setting Log=log.nsf, 1, 0, 5, 20002 Using commas is now handled as expected (in other words: works) NOTE that the Merge option does NOT support the use of commas in the string to be merged; to merge more than one value into a config value, use as many separate merge lines, please - for example: One line merges dircat.nsf to Names= and a second line merges pubnamesreplica.nsf to Names= For the above example setting Log=, you should not use a merge but a change to [log.nsf, 1, 0, 5, 20002] (without the brackets).
FIX	desktop8.ndk is now supported for Notes 8.5 (previously, synchronisation looked for desktop6.ndk in Notes 8.5)
FIX	Fixed a problem with the in-place DLL update, where a new DLL was downloaded at every client startup
CHANGE	References to empty/not set ini-variables (e.g. <ini:Location> or similar) prevented actions from being executed, as resolving their value was interpreted as "failed". Instead of interpreting empty ini- and OS-environment-values (env:) as "failed" when resolving them, these variables are now resolved as empty. NOTE that when resolving servernames from INI- or ENV-variables, these will be handled as [Local] if empty.
CHANGE	%OS_COMPUTER% is now resolved similar to <os:computer> Previously, on Citrix, <os:computer> resulted in the string "Citrix" (so as to not create multiple backup profiles across multiple Citrix servers), whereas %OS_COMPUTER% resulted in the Citrix's actual servername. Now, <os:computer> and %OS_COMPUTER% both consistently result in the string "Citrix"; for the actual computer name (=Citrix servername), please use <os:computer_org> and %OS_COMPUTER_ORG%
CHANGE	Changed the text being displayed when selecting "About ..." in RTC (Real-Time Control) systray icon
ENHANCEMENT	Upon execution of Agents, any Print statements(!), as well as the Agent.Log at the end of execution are written into log.xml
ENHANCEMENT	In addition to the already existing, optional ini-variable MC_AllowSyncDuringSetup being set to 1, this variable can now also be set to 2 - description: MC_AllowSyncDuringSetup=1 --> MarvelClient/ClientAdmin usually does not synchronize when Setup= is not set/empty in notes.ini, as this is the case when Notes is initially being installed. With MC_AllowSyncDuringSetup set to 1, MarvelClient/ClientAdmin will also synchronize changes during initial installation MC_AllowSyncDuringSetup=2 --> With MC_AllowSyncDuringSetup set to 2, MarvelClient/ClientAdmin will only synchronize changes during initial installation, if the ini-variable KeyFilename is present AND points to an existing ID file.
ENHANCEMENT	Added support for option in Zip/Unzip settings to optionally replace dots (.) in filenames with underscores (_) before appending ".zip".
ENHANCEMENT	Roaming in a desktop now also roams the stacked/unstacked property properly and also retains desktop objects
.dylib Updates (Mac OS X)	
not available	not available
.so Updates (Linux)	
not available	not available
