

MC dll/dylib - 10.0.17

 This component release is part of [MarvelClient 10.0](#)

FIX	Fixed an issue with the roaming action where in some cases it would perform a license check before login, and fail with the error "type 'roamingrollback' not licensed", even if roaming is licensed. The cause is that licenses cannot be checked before login in some situations (user name not yet known on first start, missing license because there is no actions.xml yet). This was introduced with MC dll/dylib - 10.0.0.
FIX	Fixed an issue with limited replica roaming where the journal sometimes wasn't roamed properly on new machines due to a missing path for the journal in the config.
ENHANCEMENT	When creating limited replicas, you now can select the desired ODS version (UI available from template MC Config - 20190702093100).
