Welcome to panagenda ApplicationInsights!

This guide will help you to set up panagenda ApplicationInsights.

About ApplicationInsights

panagenda ApplicationInsights (also referred to as "AI" in this document) is delivered as a virtual appliance that provides continuous and detailed information on IBM Notes / Domino application usage and design in the form of easily understandable graphs and visualizations. It offers reports on design complexity of applications and gives insights into the application landscape for optimization, migration, modernization and transformation purposes. panagenda ApplicationInsights offers administrators, developers and management the means to plan, manage execute and monitor a Domino application modernization strategy.

In order to do so, AI provides:

- Environment and inventory overviews
- Insights into usage from IBM Notes Rich clients and browsers
- Usage information per hierarchical department and user for analyzed databases
- Analytics on design and source code complexity
- Detailed "Design Insights" based on source code search patterns
- Design similarity and identification of "Template Candidates"
- Continuous collection of data (overview, usage and design changes)
- The option to define your own custom insights
- Platform wide code searches

System Requirements

Host Software

panagenda ApplicationInsights comes as a virtual appliance including its own operating system based on the popular CentOS Linux distribution. No operating system needs to be prepared for the installation on the virtualization software side.

Virtual appliances are available for VMWare vSphere (recommended for production), Microsoft Hyper-V and VMWare Workstation (for evaluation purposes). The underlying hardware and OS need to have VT-x support enabled (in BIOS). This is mainly relevant in scenarios where Workstation act as host software. Detailed information about operating system requirements can be found on the respective product pages: www.vmware.com/ products/

Virtual Hardware

Minimum hardware requirements for production environment:

- Enterprise grade server hardware for all components
- CPU: 4 Cores
- RAM: 8 GB
- Disk: 120 GB

Adapting virtual hardware to the environment size:

Most system requirements scale with the collection period and environment size. CPU is the exception, where the four cores are adequate for most customer sizes.

Baseline Requirements:

Amount of Users	RAM	Disk Space (1 year)
Up to 5k (minimum)	8 GB	120+ GB
Up to 25k	16 GB	200+ GB
Up to 50k	32 GB	250+ GB
Up to 75k	48 GB	300+ GB
100k and above	64 GB	~5+ GB per 1k users

Disk Space per Application:

In addition to the baseline requirements, the appliance requires 75MB of disk space per database.

Partitions and disk growth:

The virtual appliance consists of several partitions for the operating system, applications, log files and the database. The database partition **/opt/panagenda/pgdata** is the only one where usage will continuously increase over time.

The application partition **/opt/panagenda/appdata** will fill quickly during the initial design collection, but usage will hardly increase after that phase.

Accordingly, disk space should be assigned as follows:

- /opt/panagenda/appdata: 5 MB per database
- /opt/panagenda/pgdata: Remainder of the disk space

See chapter "Extending Disk Space" on page 33 for instructions.

Best Practice: Leaving 10-20 GB of disk space unassigned offers a certain amount of flexibility and can help speeding up database recovery times significantly.

<u>Deployment Example</u>: 40k user environment with 10k database instances

- 32GB RAM
- 1 TB disk space: 250 GB (baseline) + 750 GB (10k DBs x 75 MB)
 - Leave 15 GB unassigned
 - Enlarge /opt/panagenda/appdata by 50 GB
 - Enlarge /opt/panagenda/pgdata by remaining 935 GB

Access and Permissions

IBM Domino Notes:

The following access to the Domino environment is required:

- Single Notes ID file with access (cross certification) to all servers in scope
 - Reader access to at least one Domino Directory per Domain
 - Reader access to all servers' log.nsf databases
 - Reader access to all servers' catalog.nsf databases
 - Reader access to all servers' domlog.nsf databases where enabled
 - "Full Remote Console Administrator" access on all servers
 - Designer access to all databases where design should be analyzed

In environments where it is not possible to grant Designer access to the uploaded Notes ID file on all focus databases, the administrator can choose to give this ID Full Administration Access per Domino server (via server document). ApplicationInsights will use this access method by default if available.

Domino server requirements:

- Statlog task scheduled on all servers
- Catalog task scheduled on all servers
- INI entry LOG_DISABLE_SESSION_INFO must not be set to 1
- "Domlog.nsf" enabled and "Access log format" set to "Extended Common" (names.nsf > Server Document > Internet Protocols... > HTTP)
 MIME types "image/*", "text/css" and "text/javascript" can be excluded

Network (Firewall/Ports):

Connections to and from the appliance need to be allowed for the following services: Outbound (originating in virtual appliance):

- Notes **RPC** to Domino servers for data collection (TCP 1352)
- HTTP/HTTPS to Domino servers for data collection (TCP 80/443)

Inbound (accessing virtual appliance):

- HTTP/HTTPS for configuration and reports (TCP 80/443)
- SSH for system configuration and application tuning (TCP 22)
- VNC for system configuration and Notes client access (TCP 5901)
- Optional: PostgreSQL for data warehouse access where enabled (TCP 5432)
- Optional: Docker Management UI Portainer (TCP 9000)

It is recommended that the ApplicationInsights owner has access to the console of the virtual machine (e.g. via vSphere client).

Internet access for the appliance is not mandatory, but it is recommended to grant at least proxy access to *.panagenda.com and your defined CentOS repository for security and application updates.

Client System Requirements

Hardware, Operating System and Software Requirements:

The panagenda ApplicationInsights web interface is based on HTML5 and therefore accessible on any **HTML5 capable device**.

• We recommend the following browsers in latest 64-bit versions: Chrome and Firefox

Browser Security and Network Access:

No special web browser security settings are required to run the panagenda ApplicationInsights web interface.

To access the ApplicationInsights web interface, you need to have access to the panagenda ApplicationInsights appliance via TCP/IP, Port 80 (HTTP) and Port 443 (HTTPS).

ApplicationInsights Appliance Details

panagenda ApplicationInsights is developed as a virtual appliance:

The panagenda ApplicationInsights Virtual Image

• CentOS 7.3

panagenda ApplicationInsights is based on the very popular CentOS Linux distribution, which is based on the source code of Red Hat Enterprise Linux (RHEL). CentOS 7 was chosen because of its stability and its long time support (Maintenance until June 2024). It uses a current kernel version (3.10.x) for virtual systems. Only security patches are configured for automatic update via the YUM (yellowdog updater modified).

- Docker 17 CE
- Docker Compose 1.11
- Tomcat 8 Application Server
- NodeJS 6 Application Server
- Nginx 1.11 Reverse Proxy Server
- Java 8 Virtual Machine
- PostGreSQL 9.6 Relational Database Server
- A sub-set of Domino 9.0.1 Linux 64 Bit binaries (Domino server will not be started)

GETTING STARTED

ApplicationInsights Setup Files

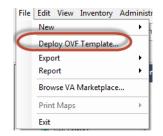

There are two options to get the virtual appliance image and license file for ApplicationInsights:

- Customers with active IBM Domino maintenance (S&S) including Domino Express offerings - have access to a special IBM Entitlement License. Please see this tech note for further information and download instructions: https://ibm.co/2plriSL
- 2. All other customers, please contact sales@panagenda.com for a trial version. In order to create the ApplicationInsights licenese, we need the following information:
 - Your Company Name
 - Text Certifier(s) of the servers you wish to analyze, e.g. /O=panagenda or /O=ACME/C=XX
 - Number of users and servers of the environment you wish to analyze

Launching ApplicationInsights using virtualization software

Recommended: VMWare vSphere/ESX via OVA

Open VMWare ESX, ESXi or vSphere and select:

The Deploy OVF Template dialog will open:

- 1. **Source:** Specify the location where you saved the ApplicationInsights OVA file on your hard drive for example: *C:/Temp/panagena_ApplicationInsights.ova*
- 2. **OVF Template Details:** In this step you can inform yourself about the ApplicationInsights version you are about to deploy. When you are done, just click on Next

- **3. Name and Location:** Is the next relevant step for deploying ApplicationInsights. We recommend to name this template "**panagenda ApplicationInsights**"
- 4. **Storage:** Then you have to select a destination storage for the virtual machine files.
- 5. **Disk Format:** In this step, please select the storage format for the virtual disks. We recommend to choose "Thick Provision Eager Zeroed"
- 6. **Network Mapping:** Then select the network the deployed ApplicationInsights template should use.
- **7. Ready to Complete:** In the final step you are shown the options you set up. Click on Finish if you are satisfied with your setting to start the deployment task.

Alternative: Microsoft Hyper-V

- Extract the file panagenda_Applicationinsights_HyperV.exe
- Start Hyper-V Manager
- Right-click on your server and select "Import Virtual Machine" from the context menu

- Click Next on "Before you Begin" screen
- Select the folder that contains the extracted files and click Next
- Select the ApplicationInsights image
- Select "Copy the virtual machine (create a new unique ID)"

2	Import Virtual Machine
Choose Ir	nport Type
Before You Begin Locate Folder Select Virtual Machine	Choose the type of import to perform:
Choose Import Type Summary	Copy the virtual machine (create a new unique ID)

- Click **Next** in the "Choose Destination" screen, unless you want to set the folders individually
- Select the folder where you want to store the virtual hard disk

- Click Next int the "Configure Processor" step please don't change the processor settings
- Specify a network connection

Before You Begin	i nis page allo	ows you to connect to virtual switches that are available on the	e destination computer.
Locate Folder	The followi	ing configuration errors were found for virtual machine 'panage	enda ConnectionsExpert'.
Select Virtual Machine	🚱 Could	not find Ethernet switch 'vswitch1'.	
Choose Import Type			
Choose Destination	Specify the v	irtual switch you want to use on computer "CONTOSO2012-HY	/P".
Choose Storage Folders	Connection:	Not Connected	~
Configure Processor	Connection	Not Connected	
Connect Network		VSStd	
Summary			

Select Finish on the summary screen to start the copy

Alternative: VMWare Workstation/Player via VMX

- Extract the file panagenda_ApplicationInsights.exe
- Start VMWare Player or VMWare Server
- Open Virtual Machine
 - Navigate to the folder where the files from the ApplicationInsights EXE are extracted
- Select the ApplicationInsights VMX file

If you are prompted to update the VMWare Tools during appliance update, decline the request. Appropriate VMWare Tools are already installed on the panagenda ApplicationInsights appliance.

Alternative: VMWare vSphere/ESX via VMX and Converter

After extracting the file **panagenda_ApplicationInsights.exe**, a VMWare Workstation type virtual machine is available (ApplicationInsights VMX file). To use this machine on a VMWare ESX Server, a free tool from VMWare named vCenter Converter Standalone (downloads.vmware.com) can be used to convert and upload it to your VMWare environment. Please see VMWare product documentation (www.vmware.com/support/ pubs/converter_pubs.html) on detailed installation and usage instructions.

Converter:

To convert and install panagenda ApplicationInsights, please follow these steps:

- Start converter
- Select convert machine
 - Source Type: VMWare Workstation virtual machine
 - Navigate to the folder, to where the files from panagenda_ApplicationInsights.exe are extracted
 - Select the ApplicationInsights VMX file
 - Select Next
 - Destination Type: VMWare Infrastructure virtual machine
 - Enter your VMWare ESX Server connection details and credentials
 - Select Next
 - Host/Resource: No changes required
 - Select Next
 - Options: No changes recommended for Trial Version
 - Select Finish to start Upload
- Depending on your network speed the upload can take several minutes
- After the Upload is finished, start your VMWare server management tool and run the newly created virtual machine
- The first few steps of setting up the system will require access to the virtual machine console

Starting the Virtual Appliance

Welcome Screen and IP Address

After starting up the appliance for the first time, you should be presented with a panagenda ApplicationInsights welcome screen. If your network has a public DHCP server available, the system might already have acquired an IP address and will display the URL. **Use the shown IP address (interface URL) in your web browser to connect to the panagenda ApplicationInsights web interface.** If DHCP is not available within your network or the panagenda ApplicationInsights appliance did not acquire any IP address, you have to configure the panagenda ApplicationInsights applicationInsi

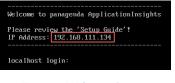

Figure 1: Welcome Screen

Appliance Login

ApplicationInsights provides a console and a graphical user interface in order to configure operating system level settings like network, time and time zone settings.

Default login information:

user "root" with password "config"

Console

After login, basic information, such as disk space, system time and IP address, are shown:

Figure 2: Basic System Information - Console

Graphical User Interface

There are two ways to use the GUI to configure your ApplicationInsights appliance:

1 Local

In order to start the GUI locally, enter the command "startx"

To start the GUI automatically when ApplicationInsights is booted, please enter the following command: "systemctl set-default graphical.target"

2 Remote Access via VNC

Please note that remote VNC access is only possible if the ApplicationInsights appliance received an IP address via DHCP.

Please refer to "Remote Appliance Access (VNC)" on page 31 for more details on VNC access.

GUI Basics

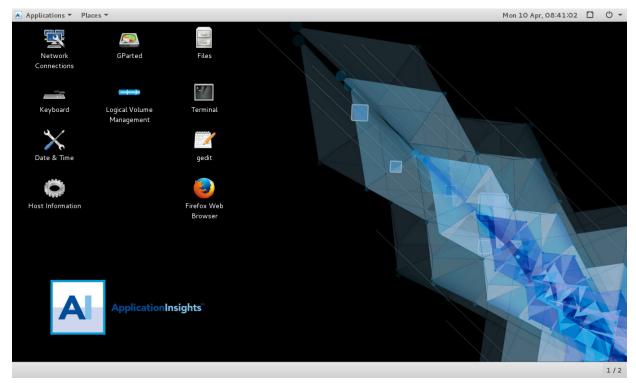

Figure 3: ApplicationInsights Desktop

The Applications menu provides access to all required applications:

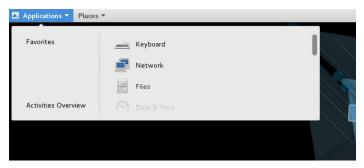

Figure 4: ApplicationInsights Applications Menu

To check an established internet connection, a **web browser** (Mozilla Firefox) is available on the panagenda ApplicationInsights appliance.

You can use the **terminal window** to check if your TCP/IP connection is established, using Linux *ping* and *ifconfig* command. For more information about *ping* and *ifconfig* commands, type *man ping* or *man ifconfig* in the terminal console window.

panagenda ApplicationInsights log files can be found within the /opt/panagenda/logs directory. The main log file (idna/idna.log) holds essential information about panagenda ApplicationInsights runtime behavior. Use the **Files** application to navigate to these log files.

To check the panagenda ApplicationInsights appliances system behavior, you can use the installed **system monitor**.

Network Settings:

To change the IP address and DNS configuration please click on the **Network** icon. Select the *Ethernet* connection and click on *Edit*:

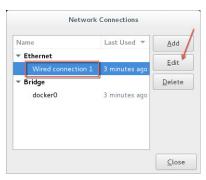

Figure 5: Network Settings

Go to the IPv4 Settings tab and select *Manual* from the *Method* drop down menu to configure the network settings as required:

		Editing Wired	connection 1			
onnection name:	Wired conne	ction 1				
General	Ethernet	802.1X Security	DCB	IPv4 Settings	IPv6 Settings	
Method: Manua	ι					
Addresses						
Address		Netmask	Gatev	way	Add	
192.168.111.134		24	192.1	68.111.1	Delete	
DNS servers:	192.168.1	11.21				
Search domains:	panagenda.	com, panagenda.local				
DHCP client ID:						
🔲 Require IPv4	addressing fo	r this connection to comp	lete			
					Routes.	
				C	Cancel Save	

TIP: If you configure "DNS Search domains", not full qualified names will also be resolved.

The virtual appliance MUST be able to resolve its own host name. Please verify that by opening a terminal window (click "Terminal" on the desktop) and using the ping command. It is recommended that both host/common name as well full qualified domain name are pingable. See "Network (Firewall/Ports):" on page 8 for incoming and outgoing network access requirements.

When changing the host name (default is "ApplicationInsights") in the **Host Information** application, please make sure to adapt the host alias properties for 127.0.1.1 in /etc/hosts. This can be done using the **gedit** application. It is recommended that both host name and full qualified domain name are entered here:

		Details	×
Overview			
Default Applications			
Removable Media			
		CentOS Linux 7	
	Device name	localhost.localdomain	
	Memory	7.6 GiB	
	Processor	Intel [®] Xeon(R) CPU E5-2620 v3 @ 2.40GHz × 4	
	OS Type	64-bit	
	Graphics	Gallium 0.4 on llvmpipe (LLVM 3.8, 256 bits)	
	GNOME	Version 3.14.2	
	Virtualization	VMWare	
	Disk	120.3 GB	

Figure 7: Host Information Application

Figure 8: Edit /etc/hosts

Time Zone Settings:

Please check the time zone settings of the appliance, use the **Time and Date** application to adjust.

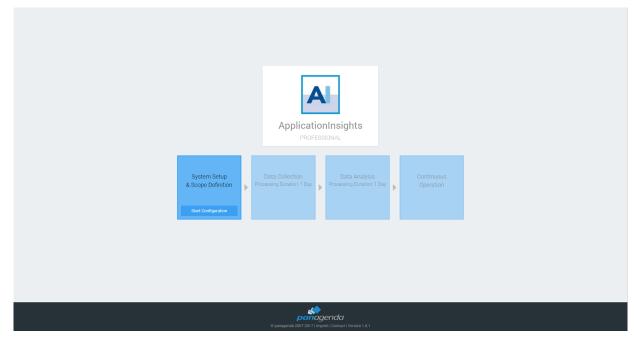

It is very important to adjust the appliance's time zone. Please reboot the appliance after changing the date/time settings as the web server and database system require a clean start with the new configuration.

Web Interface

Please enter https://<FQDN or IP> in your browser to connect to the panagenda ApplicationInsights web interface. For further information about your ApplicationInsights appliance's IP address, please refer to "Welcome Screen and IP Address" on page 15 and for further information about its hostname (FQDN), please refer to "Network Settings:" on page 17.

panagenda ApplicationInsights uses HTTPS for secure communication between its appliance and its web interface, so you have to accept the security certificate to continue. See "SSL Certificate" on page 32 if you want to use your own certificate.

When you start ApplicationInsights for the first time, you will see the following screen:

Figure 9: ApplicationInsights - First Access Web Interface

Please click on Start Configuration to open the ApplicationInsights configuration portal.

Login

By default, a user with administrative credentials is available to access the panagenda ApplicationInsights web interface.

Default login information:

```
User "config" with password "config"
```

Content Packages – Basic Configuration

The basic configuration in this section of the ApplicationInsights user interface includes:

- 1. uploading an appropriate IBM Notes User ID
- 2. setting up the relevant Domino servers

1. IBM Notes User ID File Upload

In the ApplicationInsights configuration portal, click on the Setup User ID button beside the User ID section, to open a dialog for uploading your ID file.

Please ensure that the IBM Notes User ID meets the requirements (see "IBM Domino Notes:" on page 8)

To upload the new User ID file, please open the file selection dialog by clicking the *Browse* button. Select the desired IBM Notes User ID, enter the appropriate password and click on *Upload*. "Success" means that you uploaded a properly configured IBM Notes User ID:

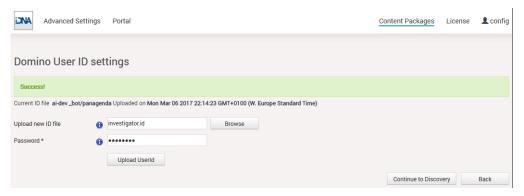

Figure 10: IBM Notes User ID File Upload

2. Domino Server Settings

Click the *Discovery* button in the in the ApplicationInsights configuration portal (https://<FQDN or IP>/idna/cfgc) to open the Domino Server Settings:

Advanced Setting	s Portal	Content Packages	License	L config
Domino Server Se	ttings			
Start New Domino Server D				
Entry server host name/IP	furrina.ddns.net			
	Start Discovery			
Add New Server				
Server host name				
	Add New Server			
			F	Back

Figure 11: Domino Server Settings – Discovery Setup

There are two ways to set up your Domino servers for ApplicationInsights:

- **a** Start new Domino Server Discovery this option provides a comfortable way to add several servers to the ApplicationInsights analysis
- **b** Add new server this section offers the possibility to add (further) servers manually. Just enter the FQDN of the servers ApplicationInsights is supposed to analyze

Start new Domino Server Discovery

The Domino server discovery starts at the server that you enter in the *Entry server host name/ IP* field. This server's Domino Directory will be scanned for further server documents.

After entering the FQDN or IP of your desired entry server, you can start your Domino server discovery (by clicking on the *Start Discovery* button) which means that the ApplicationInsights Notes client tries to access the server and reads the other server names from the server documents in its Domino directory. You will get a notification in case the ApplicationInsights Notes ID doesn't have sufficient rights to access the defined entry server. Depending on your infrastructure and settings, the duration of the discovery can vary. When it is done, the results of the discovery are displayed:

Figure 12: Domino Server Settings - Server List

In this list, all servers which have been found¹ will appear together with some information about the access status of:

- the server itself
- the log file
- the Domino Directory
- the console
- the statistics
- the domlog.nsf

If there are any access issues, they should be solved before configuring the content packages. Clicking on the red X deletes the respective server from the list. You can make use of this when you want to delete decommissioned servers that are still listed in the address book.

Please note that there is a list of all certifiers displayed, which have to be included in the license file for a successful measurement.

If there are servers which could not be found in the Domino Directory of the Discovery Server you can add to them by using the **Add new Server** option.

^{1.} in the directory of the entry server of the discovery

Check Server Access

Clicking on the link *Check Server Access* on the *Domino Server Settings Result* page leads to the following screen:

Figure 13: Check Server Access - Access Right Overview

Please ensure that columns *SrV* (Server Access), *LA* (Log.nsf Access), *CaA* (Catalog.nsf Access), *NA* (Domino Directory Access), *StA* (Statlog.nsf access) and *CA* (Console Access) are showing "OK".

After fixing missing access rights for a particular server, select the server in first column and click on **perform check** in the line *Check access to selected servers*. This will repeat the initial access check which was done during Server Discovery (see "Start new Domino Server Discovery" on page 22).

If all access right requirements of all servers are fulfilled, please check all servers in the first column and run a **perform check** in the line *Check extended access to selected servers*. This will examine several entries in the servers *notes.ini* file via console command in order to verify configuration parameters and come back with this screen:

Server Overview

Check access to selected server Check extended access to select													

Figure 14: Check Server Access - Issues

Please ensure that all requirements for *LC* (Log configuration) and *CaC* (Catalog Configuration) are met by all servers. If there is an issue in one of those columns, hover over the entry and a pop up will display the issue found. Every time a found issue has been fixed on a server, please do a recheck **extended access** on that specific server. If the customer has scheduled Catalog and *Statlog* tasks via program document(s), it is OK for *CaC* (Catalog Config) to remain in warning state. It is always OK for *MRC* (Mail Routing Config) to remain in warning state, since mail routing information is not processed in ApplicationInsights.

License File Upload

Please go to https://<FQDN or IP>/idna/cfgc#license and upload your panagenda ApplicationInsights license file when you connect to the appliance for the first time.

Figure 15: License File Dialog – No License Uploaded

Note: Servers discovered, which are not covered by the license, will be shown in the list of unlicensed servers.

Content Packages – ApplicationInsights

ApplicationInsights contains the following Content Packages:

- Domino Server Basics
- Database Catalog
- Session Activity
- Domino Web Log
- Directory/NAB Content

With the exception of Directory/NAB and Domino Web Log content, all of them are configured as described in the following section. Directory/NAB and Domino Web Log configurations are explained in separate sections.

Configure Domino Server Basics/Database Catalog/Session Activity

~
~
~
~
~

Figure 17: Configure Domino Server Basics/Database Catalog/Session Activity

To configure the Content Packages Domino Server Basics, Database Catalog, and Session Activity you only have to choose your desired servers from the list of *Available Servers*. To do so, please use drag and drop or double click on the respective servers. When you are facing a longer server list, you will also find a filter option in this configuration form as well as buttons to *Add selected* or to *Add all* servers.

From the moment you click on the *Save & Close* button, ApplicationInsights will start to measure your desired servers according to the Content Package you just configured.

Configure Directory/NAB Content

This content package collects all Person, Group and Mail-In documents from selected Domino directories.

Different from most other content packages, which collect information from multiple to all servers, usually only one server per Notes Domain is selected for this content package. Typical candidates are admin servers, hubs or dedicated directory servers.

There are two options when selecting which directories are collected:

 All address books listed in Directory Assistance (DA) of this server This option is the default, but may lead to undesired results if address books are part of DA which hold external persons. Only address books should be included that contain the company's own Notes users.

Type *	0	All NABs (inc	I. Directory Assistance)	-
Apply o	hanges			
			Save & Close	Cancel

2. Comma separated list of databases

Sometimes the better option is selecting address books manually via this option. Simply gathering "names.nsf" databases from desired Notes Domains will often provide everything that is needed.

Type *	0	List of Databases (Comma Separated)
Databases *	0	names.nsf, names2.nsf
Apply cha	anges	

Figure 19: Directory/NAB - Settings for... Databases

Configuration: Usage by Organizational Units

By default, ApplicationInsights automatically collects information about a user's organizational unit. This information is gathered from the Field "**Department**" in person documents in the Domino Directory. ApplicationInsights aggregates this data and shows the results in the catalog:

Instance Details	
Organization (Application)	Active Use 22 Last 90 dar
Application Views Usage	Design Complexity Design Similarity
User Activity	Sort Tree by Sessions Total -
Session Characeristics Departments	 panagenda 22 users active / 100% of all sessions
	Sales 7 users active / 44% of all sessions
	Consulting 7 users active / 24% of all sessions
	Marketing 2 users active / 14% of all sessions
	 Organization 3 users active / 11% of all sessions

Figure 20: Usage by Departments in Catalog

Specify a Different Field in Person Document

If you use another person document field for organizational information, please configure ApplicationInsights as follows:

- Open the file **/opt/panagenda/appdata/volumes/ai/idna/idna-config.properties** in the file system of the appliance in an editor
- Add **domino.server.nab.userdocument.import.raw=true** to enable the collection of organizational info from your organizations custom field
- Open the URL https://<FQDN or IP>/idna/sys/etl
- Click on Show/Hide Properties

Etl P	PROPERTIES	
Show/Hide Properties ai_department_disable_processing		update
org_user_property_dep org_user_property_loc org_import_property_delimiter org_import_property_parsebottomup		update update update update

Figure 21: Properties: Different Field in Person Document

- **org_user_property_dep:** please enter the name of the field in the person document which holds the organizational information for that user
- **org_import_property_delimiter:** please enter the character which separates the hierarchies in the case the organization files has hierarchical content (such as the "\" in the following example "\department\team")
- org_import_property_parsebottomup: id info is hierarchical default order is assumed as top down if the field holds the information bottom up like (team\department\segment) please check this box

Important: After changing an entry you always have to click the corresponding update once to transfer the change into the configuration table.

Disabling the Collection of Organizational Information

If your Domino Directory's person documents do not hold valid information in the department field, and there is no other field in the person document holding that information, you can disable the collection of organizational information. If disabled, the usage by department will not be available.

Please

- Open the URL https://<FQDN or IP>/idna/sys/etl
- Click on Show/Hide Properties

Figure 22: Properties: Disable Collections of Organizational Information

- Check ai_department_disable_processing
- After that you have to click the corresponding **update** link once to transfer the change into the configuration table

The changes and tweaks will be reflected in the ApplicationInsights Portal after the following ETL run at 6:30 PM.

ADDITIONAL INFORMATION

Appliance Upgrade

- Install the new version via the URL https://<FQDN or IP>/pac or using the menu option Install New Version ... in the configuration menu (default User Name & Password: "config")
- 2. Please click on the folder icon to select the ApplicationInsights upgrade package *ai-complete.debz* and
- 3. Click on the **Upload** button.

panagendo Administration Cente		
Upgrade	Choose file	UPLOAD
Logs	Download appliance logs	DOWNLOAD

A message will appear that the upload is in progress or you will get an error message if something went wrong. When the installation is done, ApplicationInsights will restart automatically.

Download Log Files

- 1. Log in to ApplicationInsights, click on the cogwheel icon (top-right corner) and select **Download Logs...**
- 2. Please click the button Download next to "Download Appliance Logs"
- 3. Save the file to your computer

Please send this file with every support inquiry. These logs will greatly improve speed and quality of processing support tickets.

Remote Appliance Access (VNC)

In order to enable access to the Linux GUI, a VNC server is pre-installed on the ApplicationInsights appliance. To start the VNC server, please follow these steps:

1 Start a SSH connection to the ApplicationInsights appliance. For this, a tool such as PuTTY is needed (http://www.chiark.greenend.org.uk/~sgtatham/putty/ download.html):

🕵 PuTTY Configuration	×
PuTTY Configuration Category: Category: Category: Configuration Configuration Configuration Category: Configuration Category: Category: Configuration Category: Catego	Basic options for your PuTTY session Specify the destination you want to connect to Host Name (or IP address) Port 192.168.203.131 22 Connection type: O Raw O Raw O Telnet Load, save or delete a stored session Saved Sessions
Translation Selection Colours Connection Data Proxy Telnet Rlogin	Sav <u>e</u> d Sessions Default Settings Load Save Delete
<u>A</u> bout	Close window on e <u>x</u> it: Always Never Only on clean exit <u>Open</u> <u>Cancel</u>

- 2 Log into the appliance with the user **root**:
- 3 To start the VNC server, enter the command **vncserver**:

Now you can access the appliance's Linux GUI using a VNC client, such as Tight VNC Client (http://www.tightvnc.com/download.php):

🚾 New TightVN	C Connection	-	_	×
	192. 168. 203. 131::5901 r an IP address. To specify a two colons (for example, myp		Connect Options	
	tions allows people to attach your v Viewer will wait for incoming o		Listening mode	e
TightVNC Viewer	TightVNC is cross-platform re Its source code is available t (GNU GPL license) or comme	to everyone, eit	ther freely	

The default connection password is **config**. It can be changed by issuing the command **vncpasswd** in PuTTY.

The VNC server is merely a tool to help in exceptional situations where the VM console cannot be accessed otherwise. Due to security considerations it is purposely configured for manual startup only.

SSL Certificate

The SSL certificate and key are stored in the folder */opt/panagenda/appdata/volumes/ai/ nginx/ssl*. If you want to use your own certificate with ApplicationInsights, just replace the files *certfile.pem* and *keyfile.key* in this folder with the corresponding files. Both files must not be encrypted (no pass phrase required)!

If you keep the same file names, nothing else has to be changed. Otherwise you will have to adapt the following lines in the file /opt/panagenda/appdata/volumes/ai/nginx/sites-enabled/ pan_ac accordingly:

```
ssl_certificate_key /etc/nginx/ssl/keyfile.key;
ssl certificate /etc/nginx/ssl/certfile.pem;
```

Please note that it is only possible to change the file name, not the path of the files. So the string "/etc/nginx/ssl/" has to remain the same! Also note that both files must not be encrypted (no pass phrase required)!

Please reboot the virtual appliance after changing the SSL certificate.

Enabling the "Open in Designer" Feature

The IBM Domino Designer can only be launched without parameters. In order to open design elements directly from ApplicationInsights, **OpenInDesigner.exe** is needed (download: https://www.panagenda.com/2017/10/open-in-domino-designer/).

OpenInDesigner.exe registers an URL protocol handler which enables ApplicationInsights to open design elements in the Domino Designer by just clicking on a URL.

Follow these steps to enable the feature:

- 1 Unzip the zip file and copy the **OpenInDesigner.exe** into the IBM Notes program directory of the client
- 2 Right click on the exe file and select "Run as administrator" from the context menu
- **3** After the launch either a success message appears or an error message including the reason why the creation of the registry entries failed

Supported browsers for the Open in Designer feature are Microsoft Edge, Internet Explorer and Mozilla Firefox and Google Chrome.

Extending Disk Space

Depending on your environment you may need to enlarge the virtual disk on which ApplicationInsights stores its data on.

Please note that all virtual disks have to be located on the same physical storage. Please also note that extending disk space ALWAYS means that you have to add a new disk on virtual hardware level. I. e. extending disk space never means

enlarging existing disks.

Extending VMWare Disk

Extending the virtual disk is done using the VMWare host application. Here are examples for VMWare Workstation and vSphere:

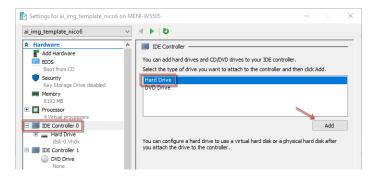

rtual Machine Settings	6		X Add Hardware Wizard X
Hardware Options			Hardware Type What type of hardware do you want to install?
Device Memory	Summary 8 GB 4	Disk file application_insights.vmdk	Hardware types Explanation Hardware types CoD/ND Drive CoD/ND Drive Hosey Drive
Hard Dek (SCSI) CD/DVD (SCSI)	120 G8 Auto detect Bridged (Automatic) Auto detect	Capacity Current size: 5.6 GB System free: 247.5 GB Maximum size: 120 GB Disk information Disk space is not preallocated for this hard disk. Hard disk contents are stored in a single file. Disk utilities	Propy Unve Wetx> Cancel
		Map this virtual machine disk to a local volume. Map Defragment files and consolidate free space. Defragment Expand disk capacity. Expand Compact disk to reclaim unused space. Compact	Add Hardware Wizard Specify Disk Capacity How large 60 you want this disk to be? Maximum disk gize (GB): 200.0 Recommended size for CentOS 64-bit: 20 GB
		Adyanced	Allocate all disk space now. Allocating the full capacity can enhance performance but requires all of the physical disk space to be valiable right now. If you do not allocate all the space now, the virtual disk starts small and grows as you add data to it. () Stare virtual disk as a single file () Split virtual disk into guiltiple files Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disk.
		OK Cancel He	

Please restart the virtual appliance after adding the new disk.

Extending Hyper-V Disk

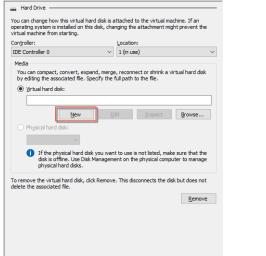

To extend the virtual disk, open the virtual machine properties and follow the steps below:

1 Navigate to IDE Controller 0, select Hard drive and click Add:

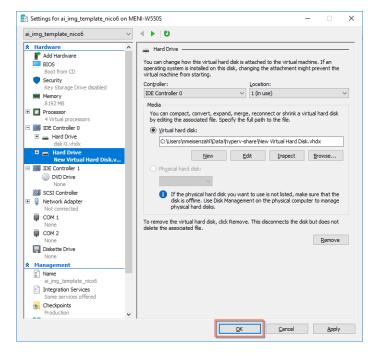

2 Select *New* and finish the wizard:

t format do you want to use for the virtual hard disk? gHD Supports virtual hard disks up to 2.040 GB in size. vfgDX This format supports virtual disks up to 64 TB and is resilient to consistency issues that might oc from power failures. This format is not supported in operating systems earlier than Windows 8.
Supports virtual hard disks up to 2.040 GB in size. VHDX This format supports virtual disks up to 64 TB and is resilient to consistency issues that might oc
— This format supports virtual disks up to 64 TB and is resilient to consistency issues that might oc

3 After finishing the wizard click **Ok** to exit the Settings:

Please restart the virtual appliance after adding the new disk.

Enlarging the Partition in the ApplicationInsights Appliance

1 The easiest way to enlarge a partition in ApplicationInsights is to use the installed partition manager **GParted**. Please launch it using the Applications menu (you can also start GParted from the Terminal with "sudo gparted"):

 $2 \quad \text{Select the new physical disk:} \\$

			(-1-2		/dev/sdb	(120.00 Gil (200.00 Gil v/sda3
			/sda2 0 GiB			.00 GiB
Partition	File System	Mount Point	Size	Used	Unused	Flags
/dev/sda1 🖘	xfs	/boot	1.00 GiB	151.79 MiB	872.21 MiB	boot
/dev/sda2 🤝	lvm2 pv	cl-pan	95.00 GiB	95.00 GiB	0.00 B	lvm
/dev/sda3 ≪0	lvm2 pv	cl	24.00 GiB	23.99 GiB	4.00 MiB	lvm

3 Select the unallocated space, open the *Device* menu and on click on *Create Partition Table*:

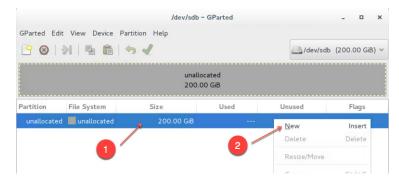

GParted Edit	View Device Partiti Create Parti Attempt Dat	tion Table	- 2	/dev/sd	Ь (200.	.00 GiE	3) ~
		unallocat 200.00 0					
Partition	File System	Size	Used	Unused	I	Flags	
	🛕 📃 unallocated	🗙 200.00 GiB					
unallocated							
unattocated							
unallocateu		1					
Unattocated		1					
Unattocated		1					
unatiocated		1					
UnattoCated		1					
UnattoCated		1					

4 Click on *Apply* in the warning:

5 Select the new *unallocated* space, right-click and select *New*:

6 From the *Create as* drop down menu, select *Primary Partition* and chose *lvm2 pv* as *File system* (if needed, a *Label* can be defined):

	Create n	ew Partition	
Minimum size	e: 1 MiB	Maximum size	: 204799 MiB
Free space preceding (MiB):	1	Create as:	Primary Partition 🗸 🗸
New size (MiB):	204799 🤤	File system:	lvm2 pv 🗸
Free space following (MiB):	0		
Align to:	MiB ~	Label:	
			Cancel Add

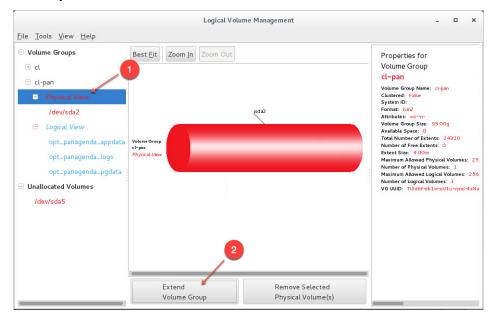

7 Save your changes by clicking the **apply button** - also on the popup message

GParted Edr	t <u>V</u> iew <u>D</u> evice	
-	0.0 L	
⊗		1 49 X

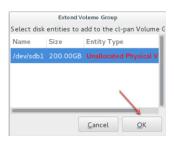

8 Start the Logical Volumes Manager from the Applications menu

9 Open the Logical View on the left hand side, select *Physical View* and click **Extend** Volume Group:

10 Select your new volume and click OK:

11 After this, select the logical volume *opt_panagenda_appdata*:

	Logical Volume Management	×
<u>F</u> ile <u>T</u> ools <u>V</u> iew <u>H</u> elp		
 Volume Groups t cl cl-pan Physical View Logical View opt_panagenda_logs opt_panagenda_pgdata 	Best Fit Zoom In Zoom Out Logical Volume Logical Volume 2 Remove Create Snapshot Edit Propert	Properties for Logical Volume /dev/cl-pan/opt_panagenda; Volume Group Name: ctypin Uogical Volume Size: :00.00 GB Number of Signature Number of Signature Volume Town AdvAdDerSAH=2306 Mount Polici : /br/Jamaand Argddas Mount Polici : /br/Jamaand Argddas Mount Polici : /bret/Jamaand Argddas Mount Polici : /bret/Jamaand Argddas File System:: XF5

12 Resize the logical volume as needed (initial dimensioning: 5MB x database instances see "Virtual Hardware" on page 6):

	Edit Logical Volume				
LV name: opt_panagenda_appdata					
LV Properties					
Mirrored					
Size Remaining free space in Volume Group: 0.0 Gigabytes					
LV size 260.0	Gigabytes 💙				
60.0	0 260.0				
Use remaining Remaining space for this Volum 0.0 Gigabytes					
Filesystem					
XFS Y					
S Mount S Mount when rebooted					
Mount point: /opt/panagenda/appdata					
Rev	ert <u>C</u> ancel <u>O</u> K				

13 Select the logical volume *opt_panagenda_pgdata* (for initial dimensioning see "Virtual Hardware" on page 6):

14 Resize the logical volume as needed (see step 12)

Tip: You can repeat this enlargement whenever you need more space.
