

Actionable Insights for License Optimization

Optimize your license management for Microsoft 365

Enterprise organizations want to maintain an accurate license inventory for Microsoft 365 and need a more effective approach with detailed data analytics to monitor user activity and proactively manage their license subscriptions.

OfficeExpert Analytics is a web-based data aggregation, analysis and reporting solution that provides full visibility into your Microsoft 365 environment. If you really want to take control of your licensing costs, then our product can help put you in command with accurate, data-driven business intelligence to repurpose unused licenses and identify redundant licenses that were incorrectly applied.

Our integrated solution provides actionable insights to help IT support groups in the following activities:

Accurately Monitor License Assignments

Setup Chargeback Accounting

Identify and Remove Overlapping Licenses

Alerts to Reclaim Inactive Licenses

Proactive License Controls

Reduce Fixed Costs

Continuously track license assignments and cross-reference that information with user activity details to spotlight inactive accounts and identify specialty licenses (i.e., Power BI Pro, MS Project, etc.) that can be reclaimed.

Distribute License Costs to Business Units

Configure accurate chargeback accounting reports to assign licensing costs to different business units.

Drive accountability for cleaning up inactive accounts by showcasing the cost savings potential to business unit managers.

Eliminate Unnecessary Expenses

Easily identify redundant, overlapping M365 licenses through intelligent algorithms. Dashboard reports show IT admins how to eliminate overlapping licenses across the enterprise – all on one screen.
