WEBINAR

Getting the Best of TrueDEM

April 2026

Product updates and more

Product Management & Consulting Team
panagenda

Your Team today

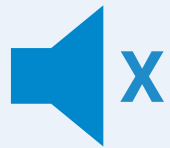

Stefan Fried

Senior Program Manager &
Senior Consultant
stefan.fried@panagenda.com

Femke Goedhart

Product Marketing Manager
femke.goedhart@panagenda.com

All attendee lines are muted

This is to prevent interruptions during the presentation.

Please submit questions via the Chat or Q&A panel

Your questions will be addressed directly during the webinar or in the Q&A section after the presentation.

The webinar is being recorded

After the webinar, we will send you a mail to give access to the recording and presentation slides.

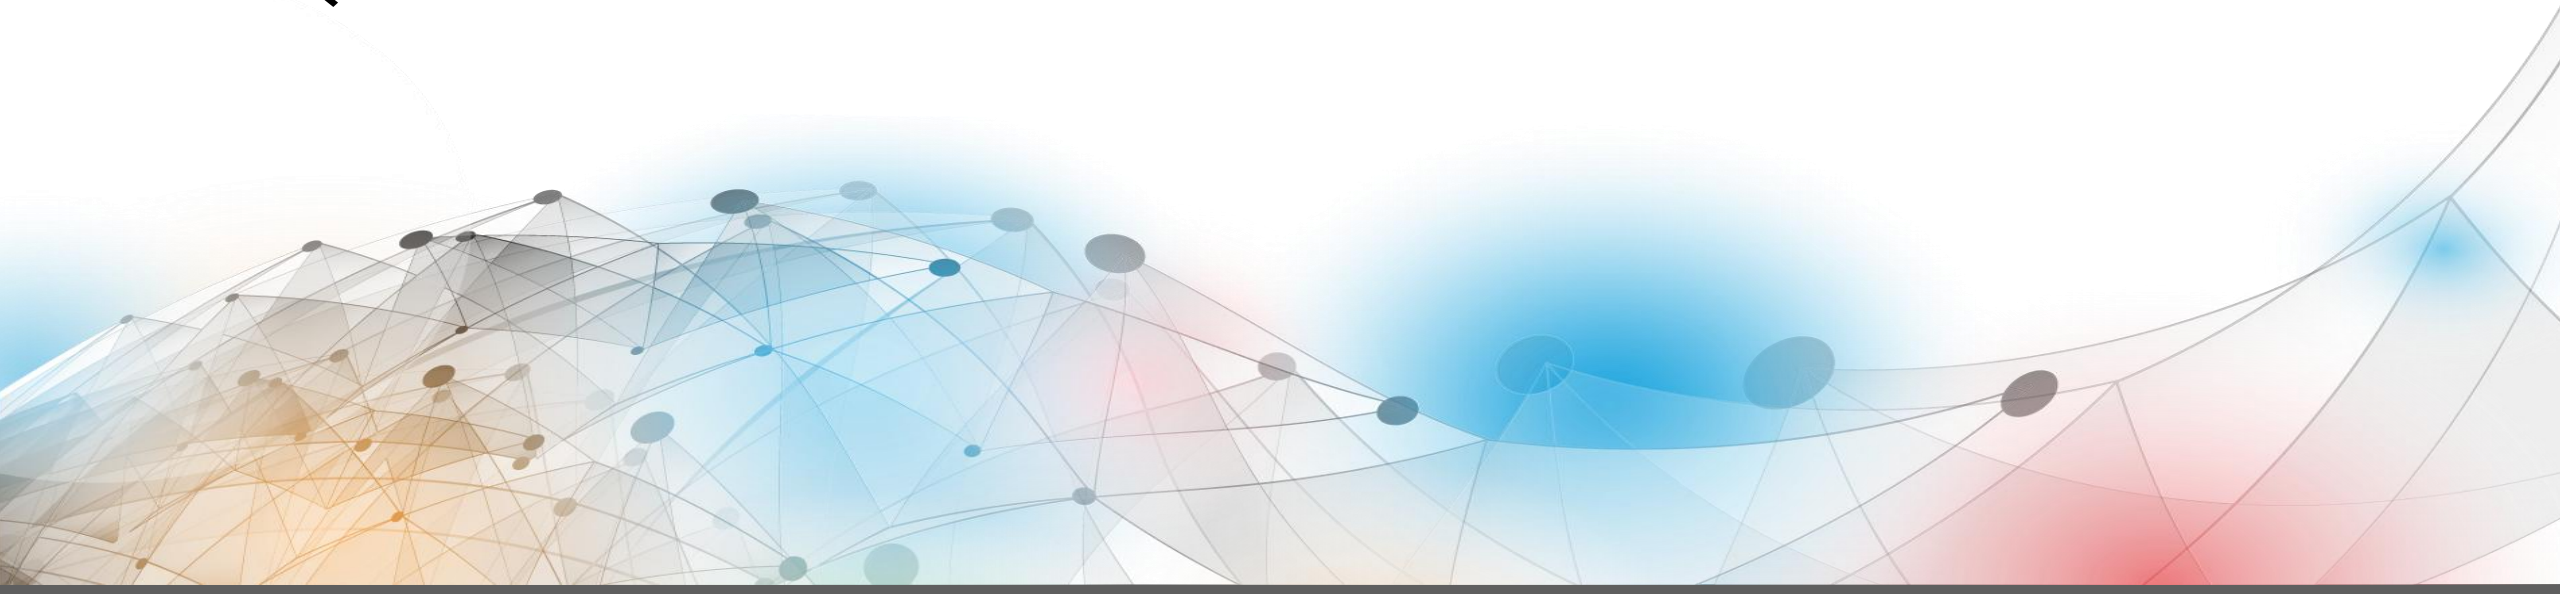

Share your feedback with us

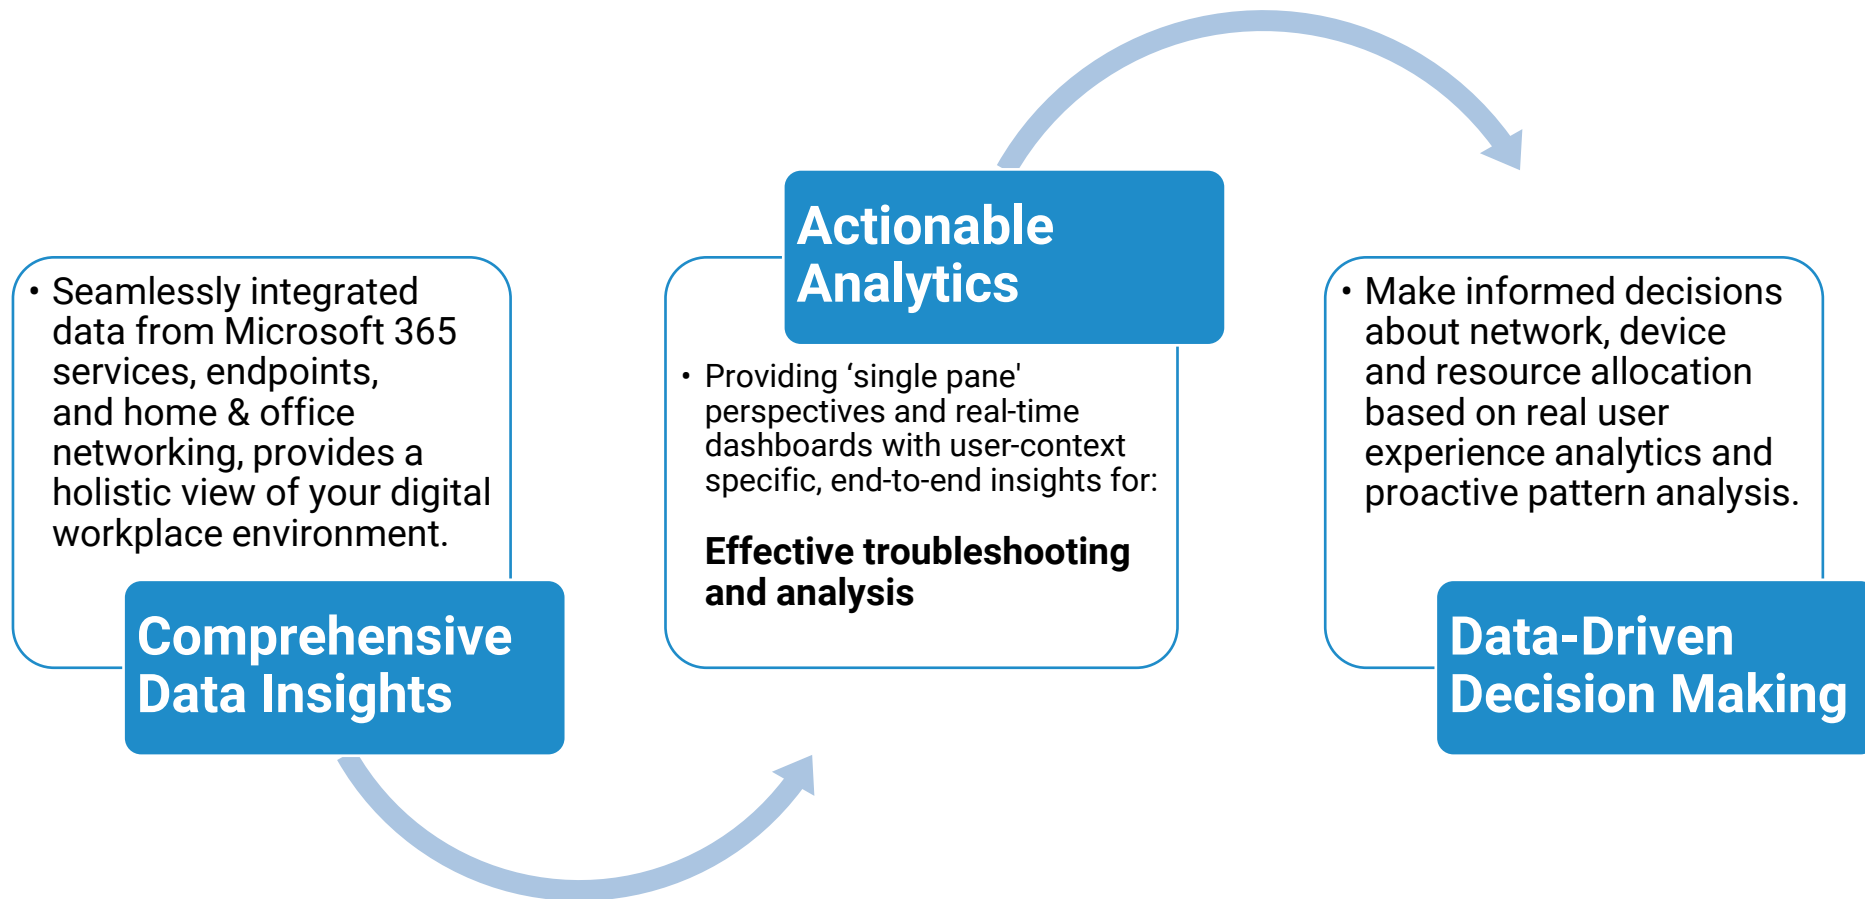

Please let us know what we can do better.

Agenda

1. What is TrueDEM?
2. Recent changes
3. Deep Dive: Mapping Wi-Fi Access Points to Locations
4. ECS Raffle
5. Q & A

Advanced Microsoft Teams Call Quality Analytics & End-to-end User Experience Monitoring for Microsoft 365

Navigation

The screenshot shows a navigation sidebar for a system named TrueDEM. At the top left of the sidebar is a hamburger menu icon and a gear icon. The main header of the sidebar is 'TrueDEM' with a blue diamond icon and a back arrow. Below this, there is a list of navigation items, each with an icon and a text label. 'User Experience' has a 'NEW' badge. 'Microsoft Teams' has an expand/collapse arrow. 'Applications Used in Calls' has a 'NEW' badge and an external link icon. 'Tenantwide Overview' has an external link icon. To the right of the sidebar, there is a search bar with a magnifying glass icon and the text 'Search for'. Below the search bar, the text 'Search for' is visible again.

New Call insight : **Multiple SSIDs Detected**

User used multiple different SSIDs during the call.

Multiple Fixes & Backend updates & improvements (Grafana 12)

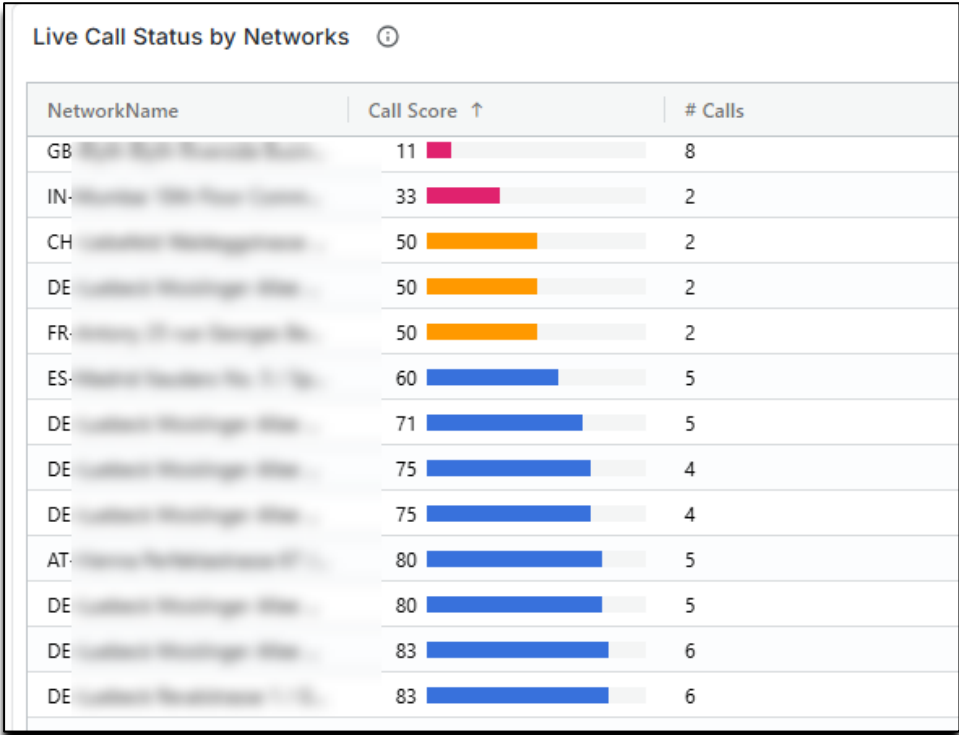

Deep Dive:
**Mapping Wi-Fi Access Points to
Locations**

Current Location Mapping

The customer provides a list of subnets that includes location mapping, and TrueDEM uses this information to align metrics with specific locations. Very similar to what Microsoft does with their Microsoft Teams CQD Building.

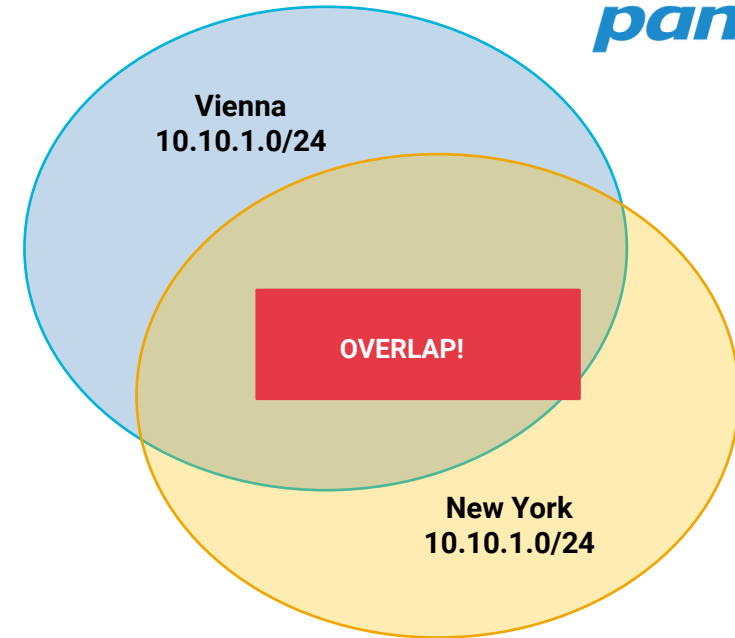

NetworkIP	NetworkName	NetworkRange	BuildingName	OwnershipType
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office
10.0.0.0	EU/...	24		Office

What's the Challenge?

Location Mapping Is Broken

Modern network architectures make IP-based location identification unreliable.

Vienna & New York – Same IP Range

Overlapping subnets across global offices make IP-to-location mapping ambiguous.

SD-WAN & Zero Trust Networks

Traffic routing no longer follows physical boundaries, breaking subnet-based geo-tagging.

The new possibility...

Mapping Teams Calls (and other things) to Access Points

TrueDEM uniquely identifies Microsoft Teams call quality issues at the physical WiFi Access Point level // going beyond what Microsoft natively offers.

TrueDEM

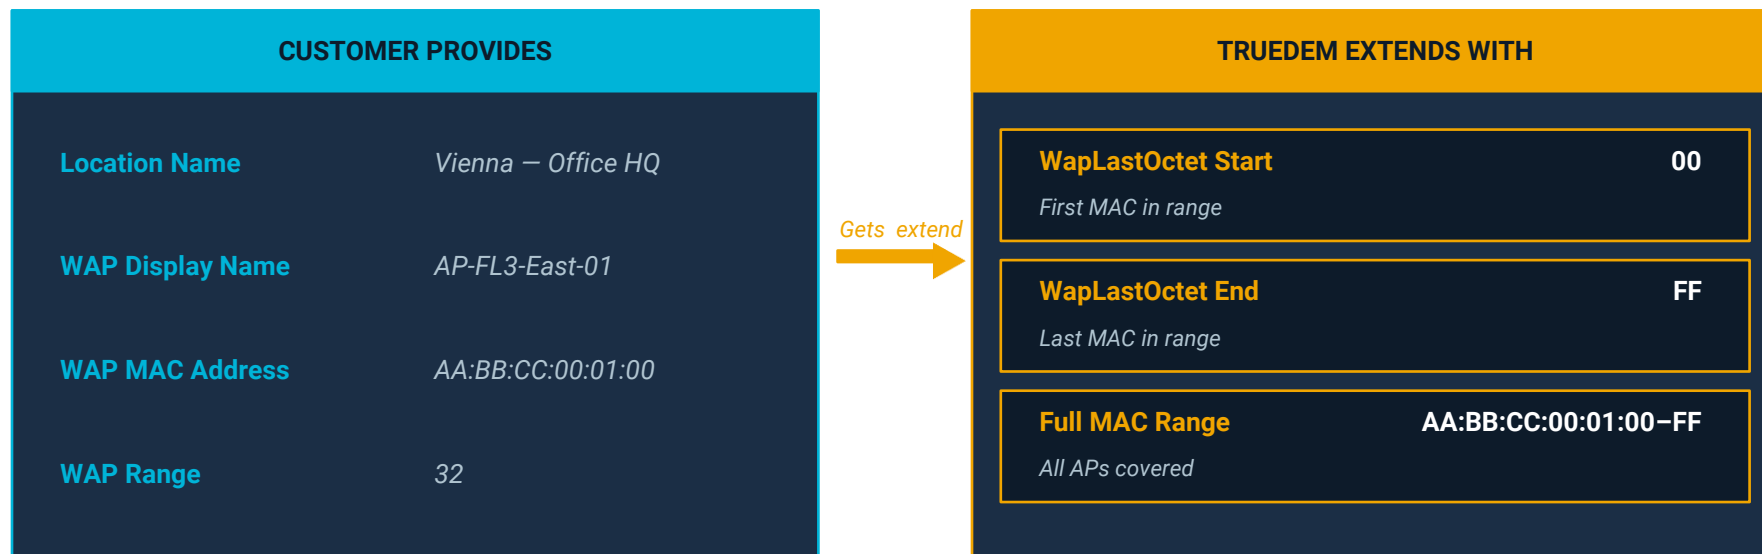

- MAC address precision
- Physical location awareness
- Maps calls to individual WAP
- Identifies problematic access points

Microsoft

- IP subnet mapping only
- No AP-level granularity
- No WAP identification
- Location overlap issues
- Building data via CQD only

How is it done ?

From Customer Input to Precise MAC Range

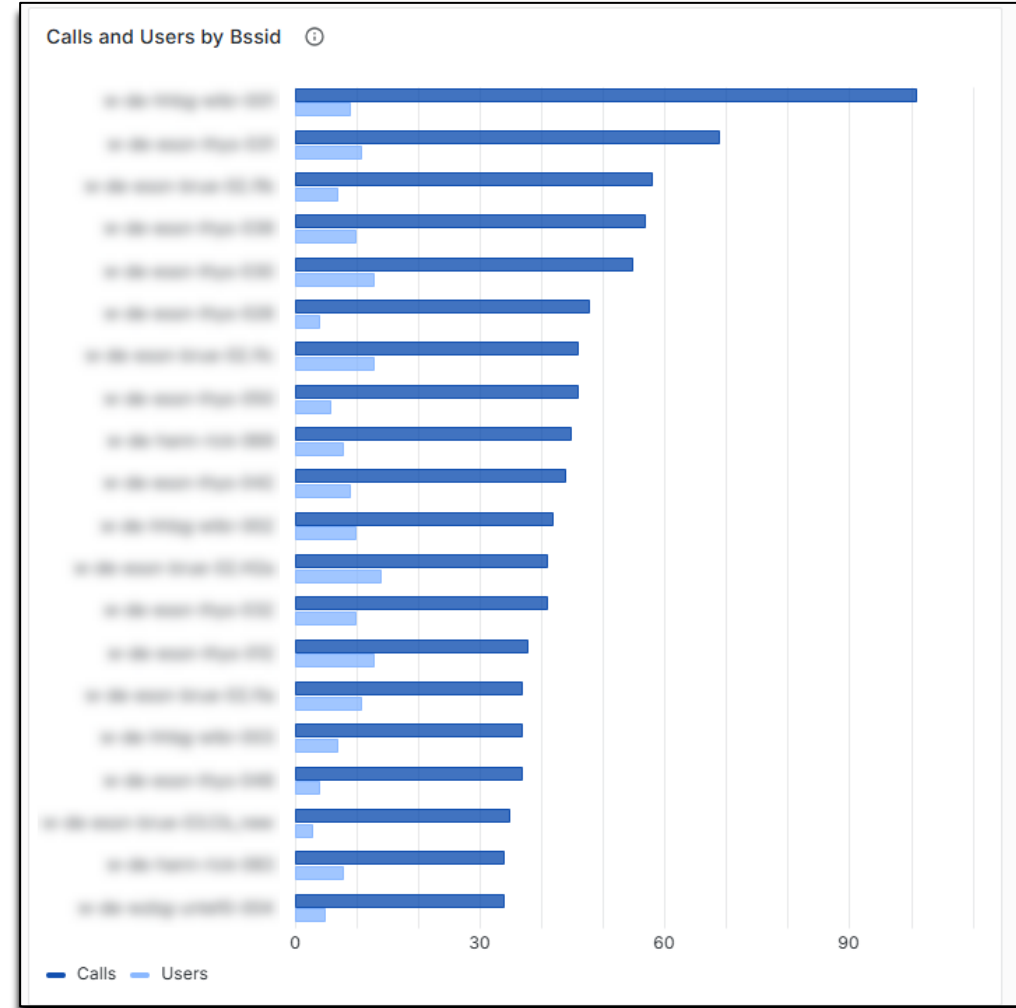

The last-octet range uniquely identifies every MAC address an access point may use – enabling exact location resolution.

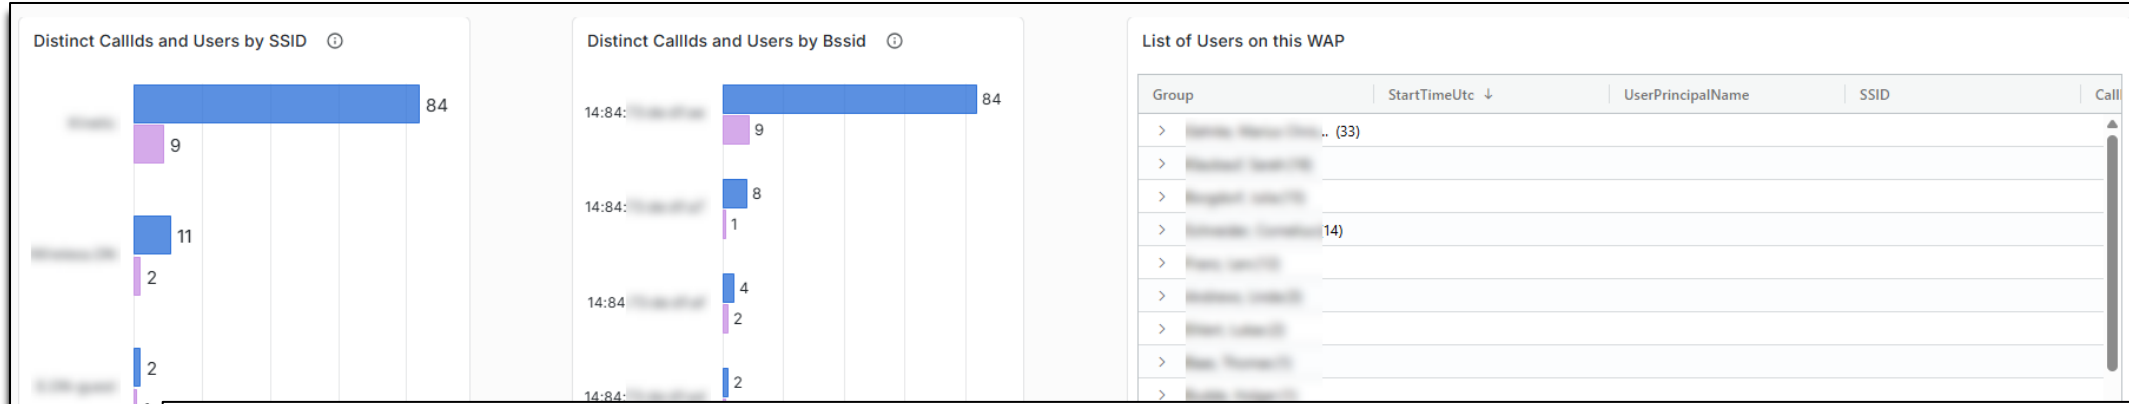

Outcome

Access Points by Number of Users ⓘ

Location	Wifi SSID	WapDisplayName	Number of Calls
