

Release Notes 2008-10-17

Config db ntf: 20081017154500
 Analyze db ntf: 20080811172500
 Windows Version: 1.5.21.272 :: MAC OS X Version: :: Linux Version:
 Eclipse Plugin:

Major Improvements: Enhanced notes.ini entry management

Configuration Database	
FIX	Fixed a problem with inheritance of bookmark actions based on a bookmark template from within desktop icon action upon first save, any changes to the bookmark template (even changing or removing the template in the desktop icon action) did not work
FIX	The location settings action (setting default location for login dialog and / or override location after login) did not work with location names that contained square brackets "[/]" - this has been fixed
CHANGE	Changed the richtext creation for mailbased installs to [richtext before button]-->[message before button]-->[button]-->[richtext after button] This was previously [message before button]-->[richtext before button]-->[button]-->[richtext after button]; also removed extra empty lines from mailbased install mails
ENHANCEMENT	Added the option to specify up to 10 notes.ini variables to set along with mailbased install
ENHANCEMENT	Added the option to specify runtime of notes.ini & variable management actions being before login, after login or at client shutdown Previously, notes.ini & Variable management action would only run after login.
Analyze Database	
- No changes -	- No changes -
.DLL Updates (Windows)	
FIX	Fixed a problem with unmerge, where any values other than lowercase values were not unmerged.
FIX	Fixed a problem with merge, where merging a value into a previously empty/nonexistent ini variable resulted in ", [mergevalue]". This now results in "[mergevalue]" as expected.
ENHANCEMENT	Userbookmarkorder Outlines in bookmark.nsf that did not have the flag "prohibit design refresh" prior to installing MarvelClient are now updated with this flag set automatically; not having this flag set is a problem for any future upgrade scenario (with or without MarvelClient), as the client will remove *any* bookmarks an end user has Also, without this flag, roaming on to a client with a missing - and thereby by MarvelClient autocreated - bookmarks.nsf did not work, as the Notes client would delete any changes immediately after startup
.dylib Updates (Mac OS X)	
not available	not available
.so Updates (Linux)
