<b>ENHANCEMENT</b>	Agents run by MarvelClient actions no longer require the "system" parameter when using NotesSession.GetEnvironmentString to get MC variables
<b>ENHANCEMENT</b>	Agents run by MarvelClient actions can now use fallbacks when getting values for MC variables. For example, the LotusScript code:  <code>NotesSession.GetEnvironmentString("MC-&gt;ini:MCUploadDB=fall\back.nsf", True)</code>  would return the value of the MCUploadDB notes.ini variable if it exists, and "fall\back.nsf" if it does not.
<b>ENHANCEMENT</b>	Internal improvements to license handling code
<b>ENHANCEMENT / FIX</b>	OS version string properly reports Windows 11 and MacOS Monterey  NOTE: the initial release of Windows 11 has a version number of 10.0.22000, so the "major version" for Windows 11 is "10". This is similar to what Microsoft did with Windows 7 and 8, which both had major versions of "6". For proper identification of Windows 11 machines, please use either <b>os:version_build</b> (should be 22000 or higher) or <b>os:version_string</b> (should start with "Windows 11").
