

Enabling MarvelClient Essentials from the Domino Directory

 **IMPORTANT**
If you already have a MarvelClient installation, you are advised to **not** enable MarvelClient Essentials.

Beginning with Notes and Domino V12, customers can easily enable MarvelClient Essentials as follows:

- 1. Open your HCL Domino Directory (public names.nsf) on any server of choice with Domino V12 or newer, and on which the public addressbook has the latest design
- 2. Click on Actions\Edit Directory Profile:

- 3. In the corresponding Domino Directory Profile, you can configure the enabled or disabled state of MarvelClient Essentials as follows:

Domino Directory Profile

Basics

Domino Directory Configuration Profile

Domain defined by this Domino Directory:

Note: This setting is obsolete as of Domino 8.5.1. It is used for compatibility with prior versions only.

Condensed server directory catalog for domain:

Sort all new groups by default:

Auto-populated group Members update interval:

Use more secure Internet Passwords:

Allow the creation of Alternate Language Information documents:

List of administrators who are allowed to create Cross Domain Configuration documents in the Administration Process Requests database:

Prevent deletion of these groups:

Enable MarvelClient Essentials:

Comments:

Leave as is (default) to retain the current state. This is useful if you already have MarvelClient and don't want to change anything, or if you intend to only deploy Essentials to a subset of users.

Enable to turn on MarvelClient Essentials on all Notes clients on the next start. This will add "pmc.dll/dylib" to the notes.ini EXTMGR_Addins entry of all clients.

Disable to turn off MarvelClient Essentials on all Notes clients on the next start. This will remove "pmc.dll/dylib" from the notes.ini EXTMGR_Addins entry of all clients.
