MC Binary - 14.0.2

This component release is part of MarvelClient 14.0

ENHANCEMENT	Added detection for MacOS 14 Sonoma
CHANGE / FIX	Experimental support for new option to delay template updates when MarvelClient roaming is used, and a user is roamed to a Notes client with a new major version; this could cause an unwanted prompt for an ID file in certain circumstances (please talk to panagenda Consulting for details on enabling this option)
FIX	Fixed a problem where the roaming cleanup process might not remove all the old files in the roaming folder
