Release Notes v2.7.1

Release Notes - GreenLight - Version 2.7.1

Improvements

Licensing

- Host Configuration: it is now possible to remove hosts that do not match the license criteria (in order to get rid of the license warning)

Charting

- Axis Display: added the option to set the largest axis maximum as maximum for all series'

Database Analyzer

- Scan Options: it is now possible to restrict analysis to specific folders

Topology Explorer

- Discovery Options: it is now possible to restrict analysis to a selected group of servers

Bug Fixes

Charting

- Axis Display: corrected an issue where adding and removing axis could lead to blank spaces in the axis area

Monitoring

- SMTP Mail Actions/Profiles: fixed an issue that produced an error when multiple recipient were added in a comma separated format
- Sametime Actions: fixed an issue where the selected profile in an existing action would not be displayed correctly
- Sametime Profiles: fixed an inconvenience where form validation would not update on change of all fields

Live Monitor

- Initial Setup: fixed an issue that required the user to log out and log in again in order to see the live monitor after initial sensor setup

Topology Explorer

- Discovery: fixed an issue where a specific problem during discovery would freeze the whole process
