

Release Notes v2.2.1

Release Notes - greenLight2 - Version 2.2.1

New Features

- Basic version of data staging has been added. Measurements are being distributed within the database structure to gain better overall performance as well as faster chart loading times for recent data.

Improvements

General

- The "Check for online update" button will now be disabled while check is in progress.
- Improved update mechanism to resolve possible lockups of the apt process.

Monitoring

- Additional information (unit, description, ...) will now be displayed for known statistics.

Bugs

- The Blackberry Enterprise Server Sensor result variable besTrapVariables.besSRPConnectState (1.3.6.1.4.1.3530.5.9.1) will now be displayed correctly.
- Fixed a bug where the display was not updated on other clients when an Administrator made changes to Sensors, Nodes, ...
- Fixed a bug with scheduling of sensors with the interval "daily".
- Domino Mail Delivery Sensor and Domino Replication Sensor will now display their correct status in Live Monitor.
