Release Notes v4.0.0

We just announce a new major release of GreenLight, the Monitoring Solution for HCL Domino and others. It includes now a new Frontend based on HTML5 which can be used for Dashboards, Grids and Visualizations.

The most notable features and improvements are listed below.

Important Information

Please make sure that you are using the latest GreenLight version **3.5.3** before you run an update! Please note, that IE 11 is not supported. Chrome, Firefox and MS Edge Chromium are the supported browser versions.

Adobe Flash - Information

This new version still requires an enabled Adobe Flash plugin in a webbrowser in order to configure sensors and server settings. The need to use flash in a browser will be very low since you rarely need to adjust server / sensor settings. The main used interface will be the new dashboard. Our intention is to move all remaining Flash elements to the new HTML5 code over the course of the next 4 -6 months. We provide two ways how you can still use a webbrowser with adobe flash enabled.

- Portable FireFox see details
- FireFox Browser on the virtual appliance of GL (by using vncviewer)

One can create as many Dashboards as you like and you can specify if they should be visible for other GreenLight Users or not. Watch the "How to build a Dashboard" video

re	A Grid is a configuration based on server, sensor keys and sensor values. On top of it you can assign threshold figures for every column you add. Columns can be collapsed into a single column where one would see an aggregation of all thresholds or expanded. Furthermore a Grid can contai With that you get the highest flexibility for your individual configurations
