

Upgrade to GreenLight 4.x

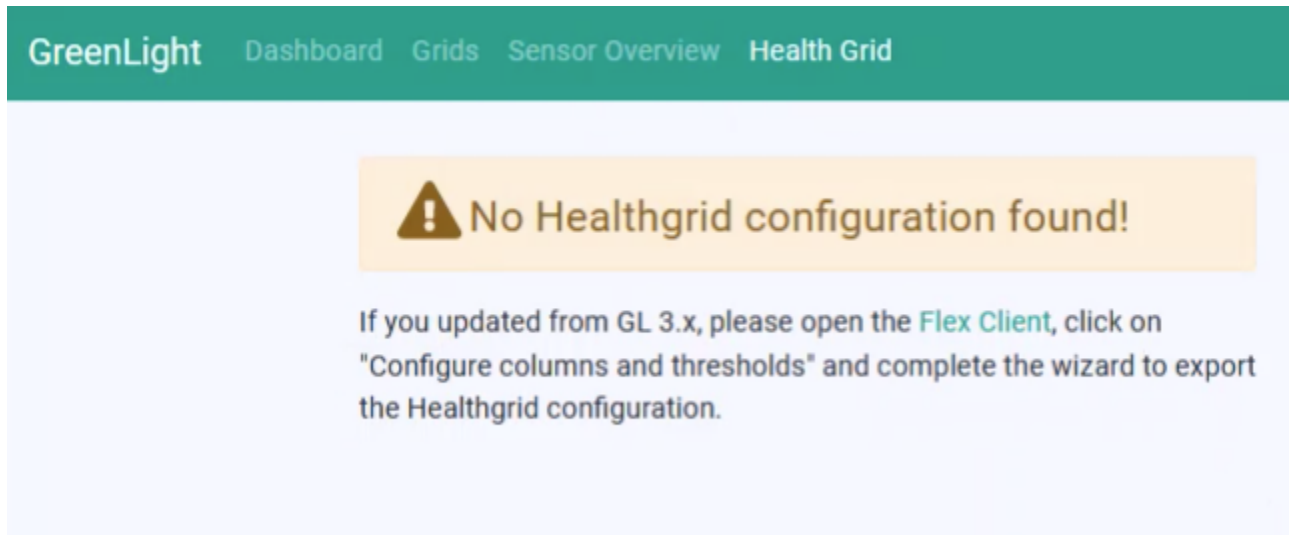

As announced by Adobe, the support for the Flash technology ended with the year 2020. Therefore we implemented a completely new HTML5 monitoring interface for GreenLight which includes:

- A sophisticated [Dashboard](#)
- a [Grids](#) page to create customized data views, which can also be displayed in the dashboards
- a [Sensor Overview](#) to gain quick insights into measurement details
- and an HTML version of the [Health Grid](#) which is equivalent to [old Flash version](#).

For further details, please refer to the [Release Notes v4.0.0](#).

1st Login after the Upgrade

When you log into GreenLight for the first time after the upgrade, you will see the following screen:

Please follow the instructions in this message. If you need help with exporting the GL 3.x Health Grid configuration, please refer to the explainer video [How to export the HealthGrid](#).

Basics

The right path of getting started with GreenLight 4 is to click through the menu from right to the left:

1. Import and adapt your GL 3.x [Health Grid](#)
2. Use the [Sensor Overview](#) to check your measurement details
3. Create [Grids](#) to organize your monitoring information
4. Use these Grids in your [Dashboards](#).
