

Notes Client Interaction

Mailbox Links

Within the server details interface, we offer the option to check mail.box content on demand. It is then possible to open those databases in Notes or a web browser using a direct link from within GreenLight.

To do this, open **Live Monitor**, then switch to the **Health Grid** tab and double-click on a Server to start the **Domino Details** dialog. In Server Details click **Mailing** and then **Check mail.box databases** to populate the Mailbox On-Demand list. Then click **Notes** or **Web** to open the Mailbox. (see provided Screenshot)

Log File Links

Within the sensor details interface, you can check measurement results of individual sensors. Looking at a Log Analysis sensor, a list of log lines can be found that match the search query. It is then possible to open the corresponding documents in log.nsf directly by using the provided link labeled "Notes".

Start the **Sensor Result Dialog** from the **Sensor Overview Tab** in the **LiveMonitor** View by double-clicking on a Server.

In the dialog, select **Domino Log Analysis** from the Sensor Results list (if you haven't configured your Sensors properly, there will be no selection available).

In the **LogEntries** tab, click on **Notes** in the **Open Document** column to open the corresponding log in the Notes Client. (see provided Screenshot)
