

# Release Notes v4.5.10

We just announced a new release of GreenLight, the Monitoring Solution for HCL Domino and others.

The most notable features and improvements are listed below.

If GreenLight fails to start up after the upgrade, please check the following articles:

Downgrade Docker Daemon: [How to downgrade and lock-in a certain docker daemon version](#)

Docker Daemon and Storage Driver= overlay2 setting : [Yum updates/upgrades](#)

Improvement	<b>Backend Tomcat Version</b> The backend Tomcat version has been upgraded to the latest version Tomcat v9.0.82
Improvement	<b>Metabase Version</b> Metabase has been upgraded to v.0.47.7 (November 2023 build)
Improvement	<b>Domino Task Sensor</b> The calculation for the minage and maxage values of a domino task got improved. For instance a minage value of zero is not reflecting a problem anymore.
Improvement	<b>Domino Log Sensor</b> log.nsf name for the Domino Log sensor can now be specified in <code>/opt/panagenda/appdata/volumes/gl/ramkin-config.properties</code> with <b>greenlight.log.search.sensor.log.db.name</b> (for all servers)  or <b>greenlight.log.search.sensor.log.db.name.servername</b> (for a specific server – use the abbreviated server name in this case).  For example: <code>greenlight.log.search.sensor.log.db.name=log2.nsf</code> <code>greenlight.log.search.sensor.log.db.name.server1=/logs/mylog3.nsf</code>
Bug Fix	<b>Domino Task Sensor</b> A bug has been fixed in which the Tasks Sensor does not send anymore "task down" alerts messages if the entire domino server is down and is therefore not reachable based on two Domino API Codes: 2055, 2562.
