

# Release Notes v1.1.2

panagenda is proud to announce the release of this new version of ConnectionsExpert, the all-in-one solution for IBM Connections Analytics, Monitoring and accelerating Adoption.

The new version is a maintenance release and contains mainly performance improvements and bug fixes. Here are a few highlights:

- Added update notification when a new product version is available
- Improved Excel export in data grids
- Several improvements to file library and orphan processing

When upgrading, the existing appliance will stay in place and no historical data will be lost in the process. Simply [download the installation package](#) and extract the debz file from the zip to prepare the upgrade. Install the new version via the URL /pac on your server or using the menu option "Install New Version ..." in the configuration menu. For detailed instructions please take a look at the [ConnectionsExpert Setup Guide](#).

We strongly encourage you to install updates as soon as they are available. The latest version will always provide best functionality and ensure the stability of your systems.
