Configuring a Maximum Number of Executions

of Executions & Conditions

☑ Limit # of executions :   『42|』

Execution of this action is restricted as follows: All 2 conditions AND at least one of 2 conditions must be met.

If once is too little, and always is too much, then an Action can be set to run for a maximum number of times using the "Limit # of executions" field.

Simply check the "Limit # of executions" box and enter a maximum number of times the Action is to be executed.

The respective number must be greater than 0 and smaller than 4,294,967,295.

NOTE that you can also tie an Action to a date/time condition as to only have it run once a week or month or only within business hours, for example.

NOTE that you can also make an action run once a month randomly (so as to not execute it across all end users on the first of a month) by using a <random:min-max> condition.

For Example:

	Numeric Condition settings
Condition:	『**<random:1-30>**』
Comparison:	○ < (smaller than) ○ <= (smaller than or equal) ○ > (greater than) ○ >= (greater than or equal) ◉ == (equals) ○ != (does not equal)
Result:	『**15**』 15

Using the above condition in an Action with a repeat Interval of "Once a day only" will execute the action once a month randomly spread out across 30+ days.

NOTE: Users that have the role [Staging] in the MarvelClient Configuration database also see a drop down list below "Limit # of exections" allowing them to choose between "Retire locally" and "Delete" - you are advised to NOT change this setting; for further details see Staging.
