Special References to Desktop Icon Actions

Desktop Icon Actions can be referenced via their Alias as follows:

Special return values of Desktop Icon Actions		
replica_exists	bool	"1" if a local replica has been found
replica_is_stub	bool	"1" if replica does not contain any views
replica_is_beyond_cutoff	bool	"1" if replica has not been replicated within the cutoff interval
replica_is_incomplete	bool	"1" if replica has been determined to be incomplete by the completeness check. The option has to be enabled in the icon action for this check to run. Will contain "0" if option is disabled.
replica_type	string	"none" - replica_exists == "0" "stub" - replica_is_stub == "1" "incomplete" - replica_is_incomplete == "1" "full" - replica exists and is neither a stub nor incomplete
replica_path	path	The current path of the local replica. Can contain relative paths. Not returned at all if no replica found
replica_moved	bool	"1" if replica has been moved (due to enforce local replica path option in action)
replica_path_previous	path	Where the replica was before we moved it. Can contain relative paths. Not returned at all if no replica found or replica not moved
