Release Notes v3.0.5

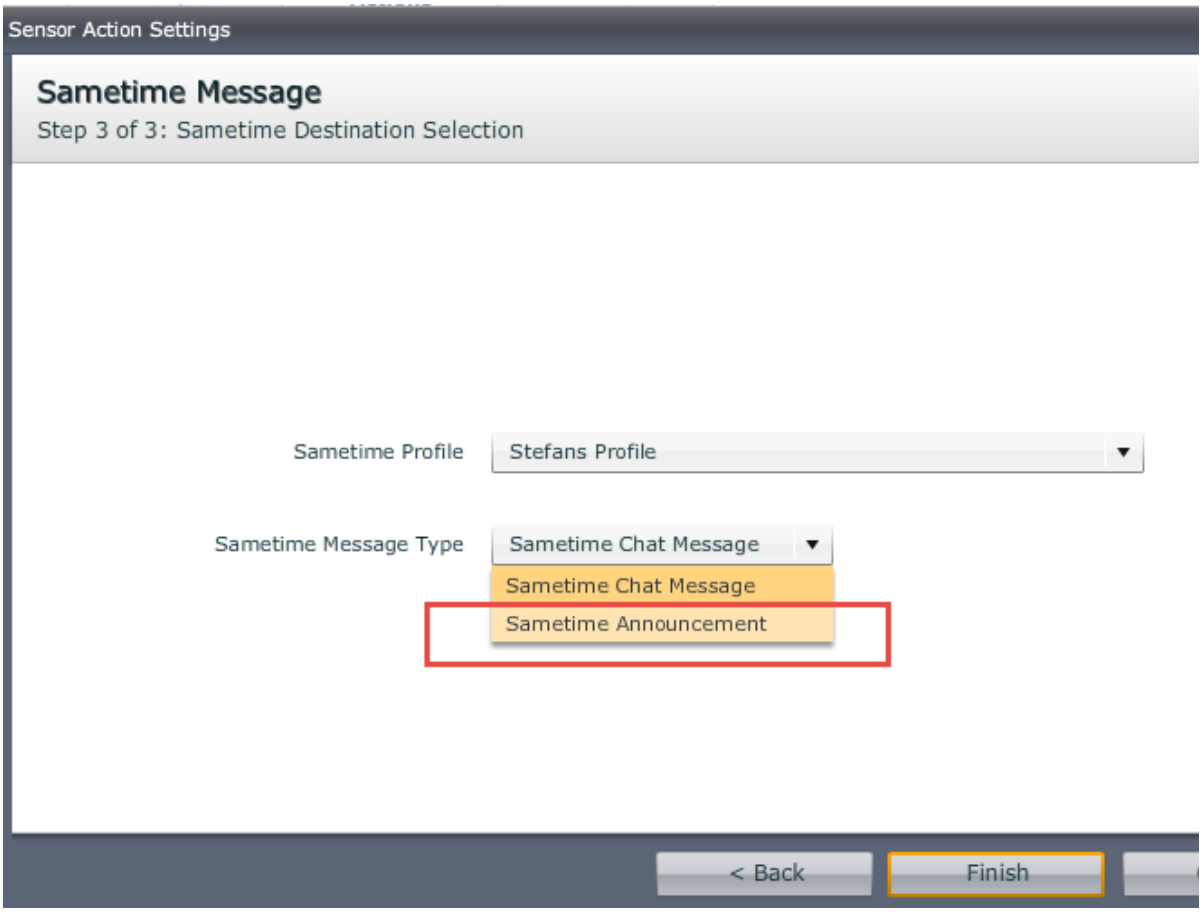

New Features

General

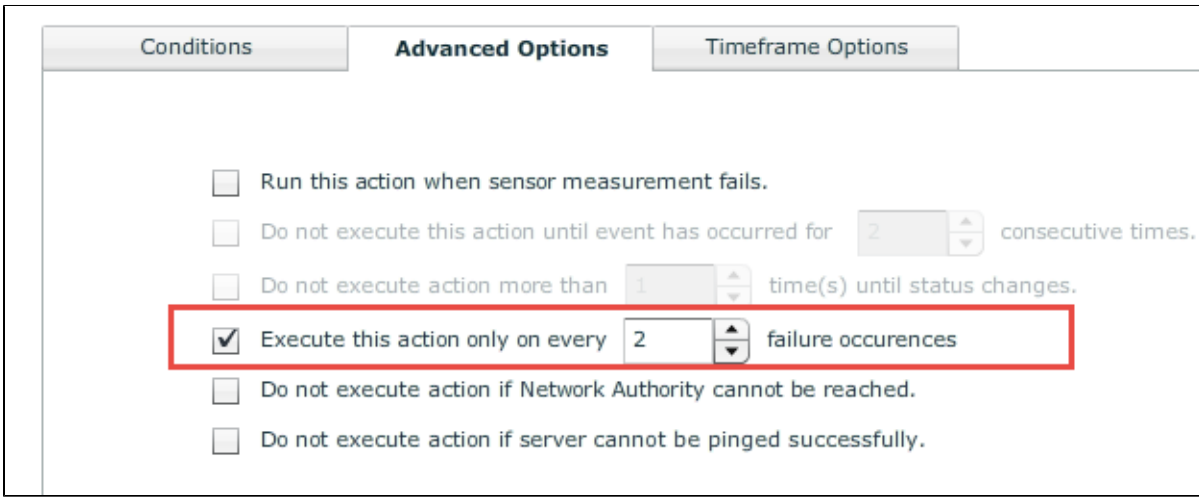

- *Sametime Announcement Action.*
  We have enhanced the Sametime Action Type in a way that you can choose between normal Chat Messages and Announcement Messages.

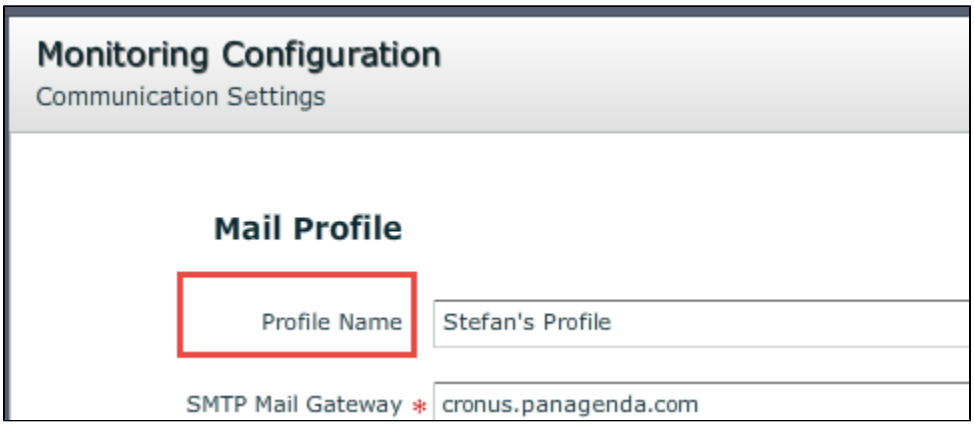

Whenever you configure a Sametime Action in a Sensor you have now the following Options:

- *Action Enhancement*
  In an action you can now activate the option *Execute this action only on every X failure occurrences*.
  If a sensor is scheduled for every 5 minutes and you would set this option to 2, then you would get notified every 10 minutes. (e.g. 12 == every 60minutes)

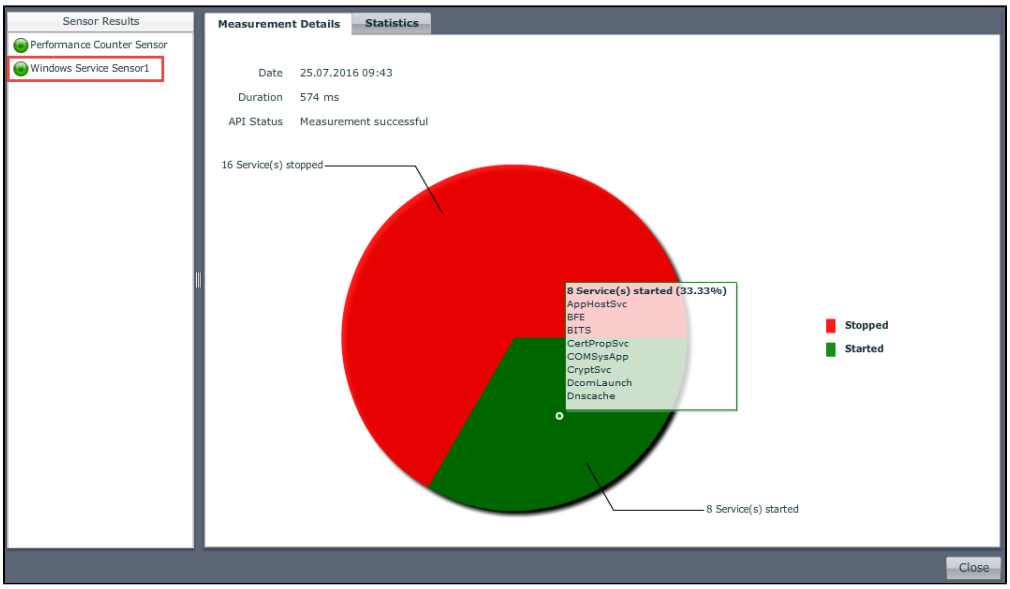

- *Communication Profile Labels*
  You can now assign Labels to Profiles

Improvements

General

- *Mail Profiles - Group Sync:* The Sync will continue if a Group in the public NAB has an unknown GroupType OR a Group has multiple Names.
- *Login:* Special characters can now be used for the Login
- Notifications: Footer information has been added (email, GL notification and Logs) in order to see the origin information of the event (GL server, Sensor name, ...)
- *DiskUsageSensor*: The internal DiskUsage Sensor (used by GL itself) has been modified and improved
- *Clone Server Configuration*: Select all /Deselect all checkboxes are now available for the server selection
- *Server Settings Wizard*: Select all /Deselect all checkboxes are now available for the server selection
- Windows Service Sensor: added UI information

Bug Fixes

General

- *SLA Report:* Fixes an issue with Mail and DiskStatistics
