

Sametime Audio/Video Statistics

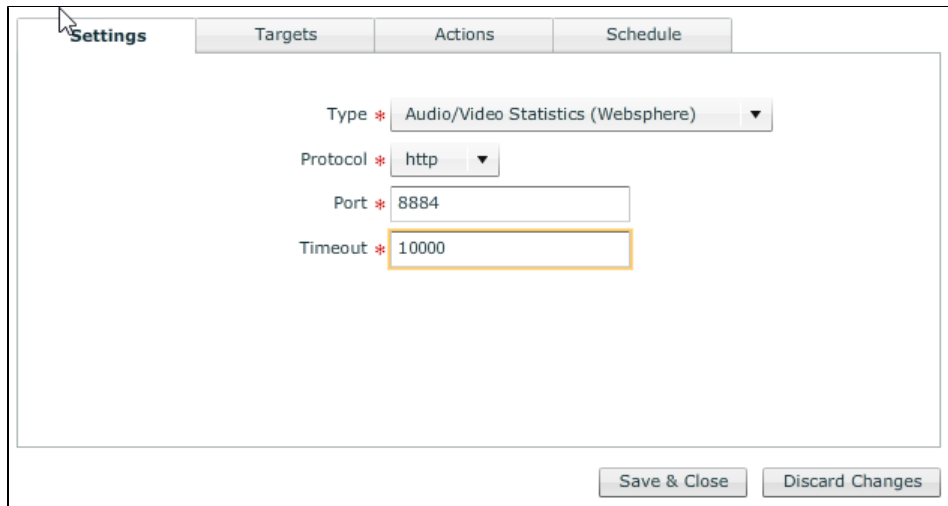

GreenLight v3.1 allows you to retrieve vital information about the Audio/Video Usage.

Are my users heavily use P2P Calls or are they happening only from time to time ? How many concurrent Calls you have ? This Sensor will provide you answers to these type of questions

Configuration

Straight forward configuration:

Open the Sametime Statistics Sensor and choose "Audio/Video Statistics" as Type

The screenshot shows the configuration window for the Sametime Statistics Sensor. It has four tabs: Settings, Targets, Actions, and Schedule. The Settings tab is active. Inside the Settings tab, there are four fields: Type (set to "Audio/Video Statistics (Websphere)"), Protocol (set to "http"), Port (set to "8884"), and Timeout (set to "10000"). The Timeout field is highlighted with a yellow border. At the bottom right, there are two buttons: "Save & Close" and "Discard Changes".

Port: Enter the SOAP Port of the MEDIA Server

No credentials are necessary!

Result

Some of the Keys which you can expect after the Sensor ran successfully 😊
