

Backup a GreenLight Box

Introduction

To Backup a GreenLight appliance box is pretty important in case of an emergency. Having a VMWare snapshot of the virtual appliance is a first layer of protection.

Starting with GreenLight v2.9.5 we have added a new function which exports daily the current configuration set of GreenLight. ...You can see this as a second layer of protection.

Note: This export does not include any historical data!

The only thing you need to do is to grab that exported file and to store it onto a separate system.
You can find the daily export in the following folder: **/opt/panagenda/dbbkb**
