Release Notes 2012-09-21

Config db ntf: 20120921125000
Analyze db ntf: 20120921125000
Windows Version: 3.0.3 :: MAC OS X Version: 2.0.39 :: Linux Version: 2.0.40
Eclipse Plugin: 1.0.1

Major Improvements: Fixed a problem with the "keep local execution control option" in combination with restricting an action on the who tab, MC Eclipse Plugin updates, fixed categorization in RT/Prio view, enhanced error logging of Cleanup and HW/SW inventory agent

General Notes	
	Supported IBM Lotus Notes releases: 5.x, 6.x, 7.x, 8.x, up to 8.5.3 (Administrators need at least IBM Lotus Notes 7.x on Windows or Linux) Supported client-side operating systems: Microsoft Windows NT4 (>=SP2), 2000, XP, 2003, 2008, Vista, 7, and Citrix/WTS, Apple Intel Mac OS X 10.5-10.8 (Leopard, Snow Leopard, Lion and Mountain Lion), Linux Supported server-side operating systems: any supported by IBM (operating system independent) *NOTE: Support is limited for platform and release combinations not supported by IBM*
	Linux & Mac OS X: Eclipse Management, Skinning, Realtime, Zip/Unzip and Attachment Blocking are not available on Linux or Mac OS X; Citrix, Linux & Mac OS X: the MarvelClient Upgrade module is only available on Windows (=not on Citrix, Linux or Mac OS X) MarvelClient on Mac OS X and Linux does not support the runtypes "After Login - Before Sync", "After Login - After Write" and "On first server access" - any such actions must be set to run at a different supported runtype, e.g. "After Login"
IMPORTANT NOTES	This release contains **select important updates highlighted in red**
Configuration Database	
FIX	Fixed a problem where clicking on "Search for replica on different server" in a Run Agent action could crash the client
FIX	Actions set to run in Background or Background - Init were not showing up in the respective categories in the view "All Actions\by RT, Prio, Title" but instead in the "After login" category
FIX	"CLOC. Location Settings" actions and "CPREF. User Preferences" actions were not properly categorized in the "All Actions\by RT, Prio, Title" view
FIX	Actions configured for multiple runtypes only showed in first selected runtype category in the view "All Actions\by RT, Prio, Title"
FIX	The profile management action now allows to use references in the profile name field
FIX	Fixed various labelling issues (e.g. 2 actions displayed german runtype options for on first server access, dll update action lacked a runtype in english)
ENHANCEMENT	Added database scope options for upcoming database specific attachment blocking
ENHANCEMENT	Added some SET Eclipse example actions ("Eclipse" Category)
Analyze Database	
FIX / ENHANCEMENT	The previous update did not include the enhancement to show the MC Analyze database title and server in the open tabs
ENHANCEMENT	The Cleanup agent has been enhanced for better error handling and logging - in case the audit runs into an error it will print the UNID of the document it last (attempted) to work on and where possible continue with the next document
ENHANCEMENT	The HW/SW inventory agent has been enhanced regarding error handling in case the Uninstall List inventory does not work
MarvelClient Upgrade	
2.7.1.1 (SURunAs.au3)	SuRunAs now runs MCUpgrade as local admin in case switching to Admin fails AND the user is local administrator
2.7.1.1 (MCUpgrade.exe)	Fixed a problem with lnk files that could not be scanned

Eclipse Plugin	
1.0.1	Fixes a problem with managing "Use canonical names for status lookup" in Sametime Communities - prior to this fix, a user would have to once manually check the option to make it manageabl. This update allows to configure the option any time.
1.0.1	Improved restart notification blocking
1.0.1	nrpc:// URLs can now also be used for Domino update site URLs (i.e. nrpc:///dbreplicaid/site.xml) NOTE: the option has not yet been added into the install form as an example as a.) it is hard to track down the cause for when the nrpc:// based install fails (we only get success or fail back from the call) b.) in case the update site cannot be opened (wrong server or replica id, no access or similar) the client will prompt the user that "the database was not found" without any further explanatory context
.DLL Updates (Windows)	
FIX (3.0.3)	Fixed a problem with "keep local exec. control" together with restricting actions on the Who tab - prior to this fix, 3.0, 3.0.1 and 3.0.2 DLLs would reset the execution control due to the Who tab restriction. This is now fixed.
.dylib Updates (Mac OS X)	
- No changes -	- No changes -
.so Updates (Linux)	
FIX (2.0.40)	The merge/unmerge options in ini/variable management now does trimmed values (leading/trailing whitespace is ignored) and case-insensitive comparisons
