# Release Notes 2011-11-12

Config db ntf: 20111112191500
Analyze db ntf: 20111112191500
Windows Version: 2.5 :: MAC OS X Version: 2.0.35 :: Linux Version: 2.0.29
Eclipse Plugin:

**Major Improvements: Fixed a problem with both the HW/SW Inventory and the Collect Locations & Connections agent, fixed mailbased install for R5 clients**

| | General Notes |
|---|---|
| | Supported IBM Lotus Notes releases: 5.x, 6.x, 7.x, 8.x, up to 8.5.3 (Administrators need at least IBM Lotus Notes 7.x on WIndows or Linux)<br>Supported client-side operating systems: Microsoft Windows NT4 (>=SP2), 2000, XP, 2003, 2008, Vista, 7, and Citrix/WTS, Apple Mac OS X Leopard & Lion, Linux<br>Supported server-side operating systems: any supported by IBM (operating system independent)<br>*NOTE: Support is limited for platform and release combinations not supported by IBM* |
| | Linux & Mac OS X: Skinning, Realtime, Zip/Unzip and Attachment Blocking are not available on Linux or Mac OS X;<br>MarvelClient on Mac OSX and Linux does not support the runtypes "After Login - Before Sync", "After Login - After Write" and "On first server access" - any such actions must be set to run at a different supported runtype, e.g. "After Login" |
| **IMPORTANT NOTES** | This release contains **select important updates highlighted in red** |
| | **Configuration Database** |
| FIX | Mailbased install has been fixed to also support Notes R5 clients. |
| | **Analyze Database** |
| FIX | The "X. Addon INVENTORY: Collect HW Details" agent has been updated to fix a problem with detecting whether end users have admin rights |
| FIX | The "X. Addon INVENTORY: Collect HW Details" agent has been updated to fix a problem with resolving cluster member names<br>- in some customer environments, the code would search for cluster members based on the abbreviated instead of canonical upload server name; resolving cluster members therefore failed; the updated agent will now always resolve cluster members from the canonical upload server name |
| FIX | The "X. Addon PERNAB: Collect LocalNamesDetails" agent has been updated to fix a problem with resolving cluster member names<br>- in some customer environments, the code would search for cluster members based on the abbreviated instead of canonical upload server name; resolving cluster members therefore failed; the updated agent will now always resolve cluster members from the canonical upload server name |
