

# Release Notes 2008-12-12

Config db ntf: 20081215201500  
Analyze db ntf: 20081215201500  
Windows Version: 1.6.24.346 :: MAC OS X Version: :: Linux Version:  
Eclipse Plugin:

**Major Improvements: Enhanced Analyze database with interactive Java table, added new views to Analyze database, enhanced MassDelete Action to optionally include physical local replicas, Option to also manage fulltext index with desktop icon Action, Auto-Create missing local replicas with MarvelClient Roaming**

Configuration Database	
FIX	Fixed a problem with pasting database links / catalog data into masschanges where the directory was not seperated from the filename
FIX	Added options to also include physical local replicas in MassDeletes (requires DLL update)
ENHANCEMENT	Added options to desktop icon actions to create/manage a fulltext index for a local replica
Analyze Database	
CHANGE	The XSLT configuration for desktop audits has been extended to also analyze page- and coordinate details <b>!!! - THIS REQUIRES *REPLACEMENT* OF THE EXISTING "desktop.xml-1" XSLT CONFIGURATION DOCUMENT IN THE ANALYZE DATABASE WITH THE ONE FROM THE NEW TEMPLATE - !!!</b>
CHANGE / ENHANCEMENT	Replaced the previous three views "by Data Dir", "by Program Dir", and "by notes.ini Dir" into one single view categorized by respective directory
ENHANCEMENT	Added a view to display desktop icons by pagenumber, row and column (X/Y coordinates) == by Position
ENHANCEMENT	Added a view to display desktop icons by pagenumber, pagename, row and column (X/Y coordinates) == by Pagename
ENHANCEMENT	Added additional information to user profile documents
ENHANCEMENT	Detail audit documents (desktop, databases, notes.ini) now display ALL user details from every detail document - in previous releases, detail data was split across multiple documents according to 32KB limits of list fields. <b>!!! - THIS NEW FEATURE REQUIRES JAVA APPLETS, JAVASCRIPT, AND SCRIPTING OF APPLETS TO BE ENABLED - !!!</b> If one or multiple of these requirements are not met, the new aggregated table applet display falls back to the old split table display
ENHANCEMENT	The new table applet allows to interactively sort and navigate all detailed audit data from within one interactive table + Clicking on Column headers sorts the respective detail document data column + Clicking into one of the bottom column cells at the end of the table allows to filter the table data
ENHANCEMENT	The manual audit action/agent has been reworked: The agent triggered from the Audit Selected action is now faster and also runs in the background
ENHANCEMENT	Added a new background agent that automatically audits user profiles (=unpacks the details from the zipfiles attached to the user profiles automatically) Please note that the respective agent needs to be enabled [Agent (Audit All)]
.DLL Updates (Windows)	
FIX	Fixed drag & drop from a Notes document to a Notes document not working (drag & drop to/from file system <> Notes worked just fine)
FIX	Fixed a problem with the encryption/password option for attachments (if enabled): Repeatedly checking the encrypt-flag and closing the file-attach dialog lead to continuous growth of the file-attach dialog window
ENHANCEMENT	Added the Notes username of the uploading end user to profile documents uploaded/updated into a Domino / the analysis database
ENHANCEMENT	Added a "KillNotes"/"ZapNotes"-option - setting MC_ZapNotes=1 in notes.ini will scan for hanging Notes tasks upon client startup If any orphaned tasks are detected, a dialog is displayed asking the end user whether s/he wants to end them.

ENHANCEMENT	<p>Added the following options to automatically create missing local replicas according to the desktop configuration at the end of client startup:</p> <p>mc:acr_enabled - Enables AutoCreateReplicas (acr); default == disabled</p> <p>mc:acr_nonewdirectories - En/Disable autocreation of missing (sub)directories; default == disabled == Create missing directories enabled</p> <p>mc:acr_allowoutofdata - Autocreate replicas outside of the Notes data directory yes/no; default == enabled == yes</p> <p>mc:acr_replicateimmediately - Create stubs or full replicas; default == disabled == stubs only</p> <p>Note that autocreation of missing local replicas ONLY WORKS for icon stacks on the Notes desktop that consist of at least one local replica icon AND at least one server icon - in other words:</p> <p>!!! - AUTOCREATION WILL NOT WORK WITH ONLY A LOCAL REPLICA LINK BUT NO SERVERLINK (where should we replicate from then?) - !!!</p> <p>If a stack has more than one local replica link, the replica will be recreated according to any one of them - which one is NOT predictable</p> <p>If a stack has more than one server replica link, the replica will be recreated from any one of them - which one is NOT predictable</p>
<b>.dylib Updates (Mac OS X)</b>	
not available	not available
<b>.so Updates (Linux)</b>	
not available	not available
