# Using panagenda ApplicationInsights: Interface Tips

The various graphs and visualizations within panagenda ApplicationInsights allow you to easily focus in on certain interest areas and data subset. For this several features exist to help you interact with the graphs.

In this topic:

Selecting/Deselecting subsets

Pie charts, bar charts, line graphs and bubble charts that show you multiple categories often allow you to select/deselect certain categories to focus in on subset. To do so, simply click on the category in the charts legend.
Certain Bubble charts allow you to focus in on part of the graph by using the mouse to select the top left most grid point of the area you would like to focus in on, holding the left mouse button down and drawing it to the bottom right grid point you would like to focus in on. Releasing the mouse there. This will concentrate the graph in on the selected area.

Example views where this is used: Usage - Sessions vs Complexity, Usage – Web vs. Client Usage, Usage – Notes Client Usage, etc.

Maximize screen usage

Hide left menu: To maximize screen width on a graph or page it is possible to hide the left- hand menu of panagenda ApplicationInsights. To do so click the so called 'hamburger' icon in the top right corner.

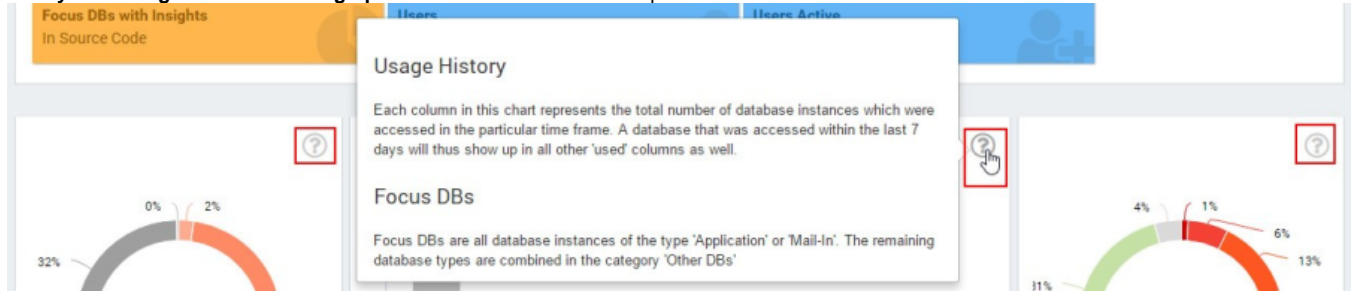

To return the menu simply click the same icon again.

Help and additional information

Certain elements in the panagenda ApplicationInsights interface have Help text associated with them to explain the specific graph or element.

Underlined: An underlined (dashed line) element usually indicates that on mouse over a help text or additional information is available.

"?" Symbol in right corner next to graphs: Indicates that there is a help text available that will be visible on mouse over.

Details: Some graphs will allow you to mouse over or click on a node or data point to access more data. To go to the instance details page for any given database in any of the bubble charts for instance, simply double click on the bubble.
