

Building your own Custom Insights

ApplicationInsights comes with a complete and fully defined set of design rulesets, insights and patterns that give you a good overview of design issues and challenges to take into account while modernizing or transforming applications. Still, most organization will have additional or specific things they would like to search for. Therefore, ApplicationInsights comes with an option to define your own custom Design Insights. This can be done on the Custom Insights – Manage page.

Please also refer to [Custom Insights](#) to understand how the interface of the "Custom Insights - Manage" section works.
