Release Notes v3.5.3

This is a a bug fix and improvement version

Improvement

- **Charting**

    In certain situations opening a sensor source (during the creation of a chart) took an unusual amount of time. This has been improved in a way that a visual indicator gets displayed in the right bottom corner whenever data is being retrieved and processed. Depending on the amount of data this can take several seconds/minutes, however you can continue to work with GL while this is being performed.

- **General**

    Nginx timeout settings has been increased to 30 minutes

Bug Fix

- **Reports**

    Fixed an issue where a change in a report was not reflected on re-opening the report.

    Fixed an issue where the creation of a report in certain situations led to Runtime Errors.
