

Add Users

You can create users for each individual you want to give access to iDNA Applications. To do so:

1. Navigate to this URL of your appliance: **https://<FQDN or IP>/idna/sys/accounts**
2. Log in with an **Administrator** user (default user: *config*; PW: *config*)
3. For creating new users, go to the **Add Users** section:

USERS

Filter:

Id	Username
42	config

ADD USER

Username	<input type="text" value="username"/>
Password	<input type="password" value="....."/>
Email	<input type="text" value="username@acme.com"/>
Language	<input type="text" value="English"/>
Match Key	<input type="text" value="username@acme.com"/>
Authority	<input type="text" value="Viewer"/>

[register](#)

CHANGE PASSWORD

Old Password	<input type="password"/>
New Password	<input type="password"/>
New Password (again)	<input type="password"/>

[update](#)

LDAP

IMPORT

[Import users](#)

Important

You have to fill in the **email address** and the **Match Key** field as well or otherwise the user creation will fail. You can use the email address of a user (or a fake address) as the match key. It only has to be unique amongst all other existing users.

Authority

Please refer to [User Roles \(Authority\)](#) for more information on that.

4. Click **register**
