

Metabase Default Users

panagenda iDNA Applications is delivered with two default Metabase users:

- **Admin:** `admin@metabase.local` (password: `config`)
User rights:
 - Create, edit, delete Metabase contents (Questions and Dashboards)
 - Publish and embed newly created Metabase contents into iDNA Applications
 - Change Metabase settings
- **User:** `user@metabase.local` (password: `metabase`)
 - Create, edit, delete Metabase contents (Questions and Dashboards)

It is highly recommended to change the passwords for both default Metabase users.

It is also highly recommended NOT to change Metabase contents within the "panagenda" Collection. All changes will be lost after updating/upgrading the iDNA Applications appliance.
If you want to use panagenda default contents (from the "panagenda" Collection) as a starting point for your own Questions or Dashboards, please duplicate them and save them to the "Custom content" Collection in Metabase.
