MC Upgrade - 10.1.22

ⓘ   This component release is part of MarvelClient 10.1

MCUpgrade.exe

ENHANCEMENT	Added logging of detected .NET framework to initial DLL deployment.
FIX / CHANGE	In case MCUpgrade.dll is used from the upgrade directory and already exists, it is now deleted before being re-deployed to make sure it is always the correct version (3.5 vs. 4).

MCUpgradeMain.exe

FIX / CHANGE	Fixed an issue for both multi- and single user migration where a then migrated notes.ini could overwrite a previous NotesIniFileOld backup (only relevant for clients with multiple notes.ini files).
ENHANCEMENT	During multiuser data migration, new program, data and shared data are now set with/out trailing \ as configured by notes itself (data+shared without, program with \); whilst not really relevant, it's plain clean/propper that way.
