MC Eclipse Plugin - 11.0.0

ⓘ This component release is part of MarvelClient 11.0

N EW	Added a new Eclipse action to clean up the workbench.xmi file. This file stores information about open tabs which will over time accumulate, since the client doesn't ever purge closed tabs from it. The new action will clean it up to remove all unused information. See Config DB release notes for more details.
FIX	Fixed an issue where newly installed plugins would not start immediately after installation, if the Notes data directory resides on a network drive.
FIX	Fixed an issue where running two Connections actions directly after each other would lead to problems with Account documents.
