 This component release is part of [MarvelClient 11.0](#)

FIX / CHANGE	<os:version_string> on iOS will now show "iPadOS" for tables with iOS version >= 13.
CHANGE	Removed some unnecessary warnings in log (they did not indicate a problem).
ENHANC EMENT	MarvelClient will now sanitize <ini:MailServer> in cases where it contains the server in the syntax @server.acme.com->CN=server/O=acme. These will be treated as if they contained only the canonicalized name.
FIX	Nomad: Fixed an issue where MarvelClient would try to open the same location twice when attempting to locate a Config DB.
FIX	Nomad: Fixed a rare issue where earlier versions of Nomad would run into MC setup issues due to missing <ini:ExtConfigServer> when updated to a newer version.
