 This component release is part of [MarvelClient 11.0](#)

FIX	Fixed an issue where Application actions would not create an MMR replica on rich clients.
NEW	Added new Clean Workbench Files action - it removes some unneeded information to keep the Eclipse workspace directory small and improve performance. See <a href="#">Config DB release notes</a> for more detail.
CHANGE / ENHANCEMENT	Improved limited Names roaming for some rare cases that are related to older templates leaving "multi language"-related fields in the design. In these cases the design refresh during roaming might fail because of the error "Not all specified languages were found in design template". If it encounters this error, MarvelClient will then try to repair this by removing the outdated fields and attempting another design refresh.
FIX	Fixed an issue where in rare cases <notes:eclipse_data_directory> would be set incorrectly.
