FIX	Fixed an issue where the Application/Mailfile action would throw an error when trying to create a managed mail replica (MMR).
FIX	<p>Fixed an issue where some manually created bookmarks would lose a view-reference.</p> <p>This would happen in the case where a user would create a bookmark by drag&amp;drop-ing a tab to the bookmark bar. It would only occur for database designs that use a frameset, and only in newer Notes Client versions. The effect was that the bookmark would open the frameset, but not automatically display the right view.</p>
ENHANCEMENT	For managed mail replicas (MMRs), the Application/Mailfile action will now also allow to enforce the local path, if the "Enforce" option is set in the action.
