

Too large ... views explained

The views "Too large groups", "Too large ACLs" and "Too large endpoints" identify analysis results for which the number of results is too large to display within a Notes view - this is typically the case when a list field exceeds around 1,000 list entries (depending on the length of all list entries).

All documents that are listed in the "Too large ..." views will not be displayed in any of the other respective analysis VIEWS - however, when opening such documents, ALL list entries will be displayed in the data tables for detailed analysis.
