MC Binary - 11.0.15

(i) This component release is part of MarvelClient 11.0

CHANGE	The Cloud Migration action will now also validate that a local replica is reasonably current before replicating. This is done based on replication cutoff.
FIX / CHANGE	In the Cloud Migration action, a missing local replica will no longer count as a failed local replication (and if the step is marked as mandatory, it will be set to done).
FIX / CHANGE	Mandatory steps in the Cloud Migration that are excluded due to preconditions (like Mass Delete action for cases where the mail replica ID changes) will now count as completed.
CHANGE	The ini variables for Cloud Migration status now get read into config variables for easier use in the Analyze DB.
ENHANCEMENT / CHANGE	In the Cloud Migration action, for "Change all links", the "Also change locations" option will now better work for offline locations.
