 This component release is part of [MarvelClient 11.0](#)

NEW	<p>New feature: Server Access Restrictor</p> <p>Allows you to prevent Domino server access for Notes clients without active MarvelClient.</p> <p>This works through a combination of 2 things:</p> <ul style="list-style-type: none">• MC will change the version that the Notes client presents to the server. This new version can be customized by the admin with <ini: MC_ServerAccessRestrictorSetClientVersion>. Example: MC_ServerAccessRestrictorSetClientVersion=99.0.7 FP2• Set the minimum client level setting in Domino server configuration settings to a sufficiently high number (e.g. 99.0.0). <p>Now, the server will deny access to any client without MarvelClient active, since its version is too low.</p> <p>Note: The ini variable must be present before login. So it has to be ensured that all clients have it turned on before activating the server-side setting. Also, newly set up clients must have MC enabled and have the setting in their notes.ini (or a pre-deployed actions.xml with an INI action in it).</p>
FIX	Fixed an issue where the support data collection feature would not work on iOS.
ENHANCEMENT	Improved Analyze DB upload performance slightly by adding a new field with just the primary key to the documents we create.
