

Customize the Azure Deployment

You can customize your deployment by editing the `vars.tf` file.

Variables	Default value	Details
prefix	panaifa	Prefix used for different resources
resource_group_name	pana-ifa-rg	Resource Group name
vm_size	Standard_B2ms	VM size
data_disk	100	size of the data disk (GB)
location	westeurope	Resource Location
source_address_prefixes	-	External IPs allowed to access iDNA Applications
rg	-	Resource Group of an existing VNet
vnet	-	Name of an existing VNet
subnet	-	Subnet name of an existing VNet
ip	-	IP of an existing VNet

Everything related to the Azure Vault and Storage Account for Terraform can be customized in `prep.sh`.
