 This component release is part of [MarvelClient 11.0](#)

FIX	Fixed an issue where upgrade result emails contained MCUpgrade.log.zip twice.
FIX	Fixed an issue where SMTPEmails could not be sent with certain region settings on Windows 10.
NEW	<p>MCUpgrade now supports sending emails via CDO, Blat and mailsend-go.</p> <p>By default, CDO.Message object is used - if it cannot be created/used, OR fails due to before mentioned regional settings in Windows, fallback is attempted to Blat.</p> <p>Blat does not support SSL; in such a case, fallback to mailsend-go.exe in the upgrade directory is attempted (must be deployed via config wizard /package).</p>
NEW	Added a new option SMTPEmailer=cdo blat mailsend-go - defaults to not set leading to auto-detection of what works; if set, will exclusively (try to) use the specified emailer.
