MC Upgrade - 11.0.56

ⓘ This component release is part of MarvelClient 11.0

FIX	Fixed an issue where LocalAdminFallback did not work in 11.0.5x releases
FIX	Fixed an issue where /ignoredeferralfilesmustexist was not appended to re-run shortcut in 11.0.4x and 5x releases, leading to users being asked again whethere they want to defer an upgrade
FIX	MCUpgrade now sends fewer tracking emails (4 at max, at 2, 25, 50 and 75 percent progress); previously it would send 6 or more
FIX / CHANGE	Moved deletion of the re-run shortcut to after deferral (if applicable) / before Upgrade Init
CHANGE	Changed the error message when launching MCUpgradeMain fails or returns an error from "ERROR: Could not launch program as current user with Admin rights ..." to "ERROR: Launching program as current user with Admin rights returned ..."
CHANGE / ENHANCEMENT	Rather than just returning Error 1, MCUpgradeMain now returns the last error code from a failing (un)install, if applicable
NEW / ENHANCEMENT	MCUpgrade now also accepts (typos) /smpttest and /smptinfo command line parameters in addition to /smtptest and smtpinfo ;-)
ENHANCEMENT	MCShutdown will now exit immediately and re-run itself if run from Notes client, so as to detach itself from Notes
ENHANCEMENT	If run from Notes client, MCShutdown now automatically closes itself after notes is closed (this is for when launching it together with Notes)
ENHANCEMENT	MCShutdown now has a new option "/noautoterm" to disable automatic closing when run from Notes client and the Notes client is closed
ENHANCEMENT	MCShutdown will now exit if another instance of MCShutdown is already running; only another instance of MCShutdown /auto is allowed in parallel
ENHANCEMENT	MCShutdown /auto will exit silently without logging if another instance if MCShutdown is executed
