Viewing Profile Documents

If you use the Advanced Properties menu to choose the "Profile Documents" option, you will see a dialog like this:

I Choose A Profile Document					
Please choose a profile docume	ent from the list below:				
Search:					
PROFILE NAME	USER NAME/KEY				
(otsprofile)	toolbox_otsuniquekey				
(statdataversion)					
gadgetproxymetadata	toolbox_metadatauniquekey				
tmpprofile					
Delete	ОК С	ancel			

This will display a list of all the public profile documents in the database, or the profile documents with your user name as the key. If there are a large number of profile documents in the database, the Search box is useful for finding a specific document (it will search the profile name and key in the table).

If you select a profile document and click the Delete button, and you have ACL access to delete documents in the database, the profile document will be deleted. You will see a warning dialog asking you to confirm this decision just to be safe.

🍿 Con	firm Delete	Х			
Are you sure you want to DELETE: (otsprofile) Profile Document for [toolbox_otsuniquekey]?					
	OK Cancel				

If you double-click an entry in the profile document list, or you select and entry and click OK, the Advanced Document Properties dialog will open to display all the fields in that profile document.
