About the Cinema Splash Screen

The Cinema Splash Screen is comparable to an automatically playing PowerPoint slide deck - but for the MarvelClient Upgrade progress bar.

Using the Cinema Slide Editor, you can create any number of slides which automatically play from the first to the last slide, to then repeat from the first or any slide of choice.

Cinema Slide decks can also be created in **multiple languages**.

The splash screen slide deck is effectively created in HTML format - however, since creating (good looking) HTML files is not an easy task, the Cinema Slide Editor makes it easy for you.
