Sametime Community Statistics

Overview

Retrieving Sametime Community Statistics helps you do understand how heavily (or not heavily \mathfrak{C}) your IM Infrastructure is used

Sensor Configuration

Whenever you start configuring the "Sametime Meeting Statistics" Sensor, you need to set the following

- Protocol
- Port (Soap port number of the STMeeting Server)
- Credentials
- URL --> this is the default servlet url

Requirements

Make sure that the user account which is used in aboves configuration, has the "SametimeMonitor" Role in the Sametime Configuration DB (stconfig.nsf) assigned.

--> this role points to the default configuration for the servlet

Output

The result of the measurement run is a very long list of Community Statistics

e.g.
