 This component release is part of [MarvelClient 12.0](#)

## Config DB - General

<b>NEW</b>	<p>The "Generate PostOpen Script" dialog on the Mailbased Installer form (in the Administration – Installation view) now has a new option: Deploy code to a standard mail template</p>  <p>This option displays a dialog that allows you to make a copy of an existing mail template, with the Mailbox PostOpen Script code already copied to the proper design elements in the new template. This will make it much easier to get started testing in your environment, if you choose to use this deployment method.</p>
<b>ENHANCEMENT</b>	INI Management actions of type "XML", "JSON", and "Custom .ini file" can now be enabled for Nomad platforms
<b>ENHANCEMENT</b>	Updated the "Delete all entries in ECL" example action to also preserve the "Domino Template Development" ECL entry introduced in Notes 12
<b>ENHANCEMENT</b>	The mail-based install template code now stops searching for binaries when an appropriate one is found, instead of continuing to check all binaries for all platforms
<b>ENHANCEMENT</b>	The Online Update License tab labels are now translated
<b>ENHANCEMENT</b>	Nomad Web is now a selectable platform for the following actions: File Operation, Cleanup, Write XML, and Process Additional actions.xml
<b>CHANGE</b>	Small change to the wording on the dialog box that appears when the Config DB automatically checks for updates
<b>CHANGE</b>	The MCUUpgrade Free option on the Online Update form has been removed, and the text asking to enter a license key for MCUUpgrade has been modified slightly
<b>FIX</b>	Fixed a problem where the "Browser" platform option appeared to be selected in Read mode for INI Management actions of type "MS .ini file"
<b>FIX</b>	Added a missing translation for the "What has been updated" tab on the OnlineUpdate document
<b>FIX</b>	Certain types of documents (e.g. MarvelClient Upgrade configurations, Bookmark actions, Desktop Icon actions, etc.) will prompt you to delete related documents if you delete them. This prompt will no longer be triggered if the document is a Replication or Save Conflict.
<b>FIX</b>	Fixed a problem with OnlineUpdate where the version number of the latest Win64 DLL could overwrite the version number of the latest Win32 DLL when checking for updates
<b>FIX</b>	If there is a license update, OnlineUpdate now disables all old active licenses, not just the most current one
<b>FIX</b>	If you choose the Online update option "Update This Database (Selective)" or "Auto-Prepare Update", the Download Update tab was missing the Eclipse Plugins, and the DLLs after 12.0.56 were sorted at the bottom instead of the top

## Config DB - MC Upgrade UI

<b>FIX</b>	Fixed a problem where publishing would fail silently if multiple installers have the same name (e.g., MUI.msi.w32.n1.exe for 12.0.1 and 12.0.2)
<b>FIX</b>	Fixed a problem where whitelisted items might be written to MCUUpgrade.ini incorrectly, causing whitelisting to fail with "MYGETINSTALLDOC: Error in line 35: Type mismatch 13"
<b>FIX</b>	Fixed a problem where clicking "Save Service Install Files" could result in an error message "Path not found"
