Release Notes 2011-06-21

Config db ntf: 20110621153000
Analyze db ntf: 20110621153000
Windows Version: 2.0.24 :: MAC OS X Version: 1.10.14 :: Linux Version: 1.10.14
Eclipse Plugin:

Major Improvements: Reworked Addon Agents (Collect Locations, ..., HW/SW), ID file Notes Shared Login Monitoring, Show self-created folders

	General Notes
	Supported IBM Lotus Notes releases: 5.x, 6.x, 7.x, 8.x, up to 8.5.2 FP2 (Administrators need at least IBM Lotus Notes 7.x on WIndows or Linux) Supported client-side operating systems: Microsoft Windows NT4 (>=SP2), 2000, XP, 2003, 2008, Vista, 7, and Citrix/WTS, Apple Mac OS X Leopard, Linux Supported server-side operating systems: any supported by IBM (operating system independent) *NOTE: Support is limited for platform and release combinations not supported by IBM*
	Linux & Mac OS X: Skinning, Realtime, Zip/Unzip and Attachment Blocking are not available on Linux or Mac OS X; also, MarvelClient on Mac OSX and Linux does not support the runtype "After Login - Before Sync" - any such actions must be set to run "After Login" (Agents and INI Management)
	This release contains **select important updates highlighted in red**
	Configuration Database
FIX	Fixed a problem where actions running "After login - before download" where incorrectly displayed in the category "After login"
FIX /CHANGE	Change/Fixed MIMEConvertWarning Preference to be properly set to 0 if enabled (confusing but that's how it needs to be if enabled) This means that if you resave a "Settings\CPREF. User Preferences" action in which Enable MIME save warning is being managed (whether it's being disabled or enabled), it would CHANGE the existing behavior to the opposite! - In such a case, please make sure you remove the setting from the current set of managed settings and add it in the correct list of en- or disabled settings.
CHANGE	Changed the realtime example "Allow creation of local SYSTEM databases" to include all relevant non "*.ns?" filenames (see 8. for further details)
CHANGE/ ENHANC EMENT	Changed the view label [ID Files\Cert. & Issuer] to [ID File\Cert. & more] - in addition the view has been enhanced to categorize ID files by a.) Certifiers and b.) Notes Shared Log-In details (see .DLL update 2.0.24 for details)
ENHANC EMENT	Added a new realtime example "Prevent local database creation" to prevent creation of any .ns? database (*.nsf, *.ns4, *.ns5, etc.) - in combination with 8.) this allows for reliable prevention with flexible whitelisting
ENHANC EMENT	Added a new role to both config and analyze database to optionally show a navigator option show "Self-created folders" This navigator menu item is available / functional if a user a.) has the role [ShowFolders], and b.) has folders to display underneath the respective navigator entry
	Analyze Database
FIX /CHANGE	Added the roles [Rollback], [Admin] and [Server] to both reader and author fields of rollback documents created from the analyze database
FIX /CHANGE	Reworked the existing warning category in the Analyze view "Lotus Notes\by Notes & MC Release" to indicate wrong InstallType notes.ini settings
CHANGE	Changed the layout of the cleanup/automailer configuration form in the analyze db: the "send summary to"-field and the "run cleanup once now" button are now at the top of the form, the button is now also labelled "Run Cleanup/Automatailer once now"
FIX /ENHAN CEMENT	Added an additional warning category to the Analyze view "Lotus Notes\by Notes & MC Release" to indicate wrong InstallMode notes.ini settings
ENHANC EMENT	The ADDON. PERNAB agent to optionally collect locations, connections, ... has been reworked to complete much faster in larger environments Please note that in order to benefit from this update, you must "Check for Update" in the respective run agent action after updating the design of the Analyze database.
ENHANC EMENT	The ADDON. (HW/SW) INVENTORY agent to optionally collect OS hardware and software details has been reworked to complete slightly faster in larger environments Please note that in order to benefit from this update, you must "Check for Update" in the respective run agent action after updating the design of the Analyze database.

NEW /ENHAN CEMENT	The ADDON. (HW/SW) INVENTORY agent has been enhanced to also collect Product Codes (=Product Identifying Numbers) along with a Software Inventory - this can be useful to centrally inventory product codes for uninstalling specific software (prior to software upgrades, for example) Please note that in order to benefit from this update, you must "Check for Update" in the respective run agent action after updating the design of the Analyze database.
NEW /ENHAN CEMENT	Added an option to the Java table display in the Analyze database to change the font used in the table; MS Gothic will properly display Japanese characters (Arial does not) The setting is memorized in the viewing users notes.ini - note that changing the font with reader rights is supported in Notes 7 and up; earlier Notes releases require Author rights with Create documents in order to be able to edit the font settings dialog.
NEW	Added a new role to both config and analyze database to optionally show a navigator option show "Self-created folders" This navigator menu item is available / functional if a user a.) has the role [ShowFolders], and b.) has folders to display underneath the respective navigator entry
.DLL Updates (Windows)	
FIX /ENHAN CEMENT (2.0.22)	MC now supports the use of environment variables in the ini:ConfigFile parameter and for parameters inside of any such referenced ConfigFile
FIX (2.0.23)	Fixed a problem where managing location names with japanese characters could lead to truncated location names
NEW /ENHAN CEMENT (2.0.24)	The optional "keyfile.xml" (as can be enabled via [Advanced\XTX. Extended XML Export]) now also stores the information whether Notes Shared Log-in (NSL) is enabled for a users id file
.dylib Updates (Mac OS X)	
- No changes -	- No changes -
.so Updates (Linux)	
- No changes -	- No changes -
