

MC Config - 20190110142500

This component release is part of [MarvelClient 10.0](#)

NEW	Now also available in Japanese
ENHANCEMENT	Improved online help: All fields on the When, Who and Admin tab, as well as the title, en/disable and RunType field in the Config database are now linked to corresponding articles on kbase.panagenda.com when pressing F1
ENHANCEMENT	When-tab: The summary list of selected Conditions and Access Definitions is now scrollable in edit mode. Please note that unchecking entries in the summary list is intentionally not supported.
CHANGE	<p>The action title for A3.2. Desktop Icon & Replica has been changed to A3.2. Application/Mailfile</p> <p>Actions of type A3.2. Application/Mailfile are now categorized as both "DesktopIcon" and "Application/Mailfile" in the view All Actions\by Type</p>
CHANGE	<p>In views, actions are no longer displayed once per runtime, unless it makes sense.</p> <p>Before, if an action had multiple runtypes, it would show up once for each. This was done for consistency's sake, even in views that did not benefit from it.</p> <p>Now, the only view where it still shows up once per runtime is 'All Actions\by RT, Prio, Title'.</p>
FIX	Fixed an issue in Online Update where it would run into problems if an online available language is not available on the MC database
FIX	Fixed an issue in the Profile document action; where the use of multiple time ranges lead to duplicate entries in the action XML
FIX	Fixed an issue with Mailbased Install where not including a binary did not set EXTMGR_ADDINS in notes.ini
FIX	Fixed an issue with Mailbased Install when having a license document without title
CHANGE / ENHANCEMENT	Only for non-Essentials customers: If the MC Config database does not have the role [HideEssentials] yet, future Online Updates will add the role and assign it to all users who also have Role [Admin].
FIX	Fixed an issue where Mailbased Install documents were flagged as Essentials even with an existing and enabled License document
FIX	Fixed an issue in the DLL Update action; it was not working in all cases for Essentials customers
CHANGE	Improved the layout of the dialog to en/disable conditions to better deal with long titles
FIX	Fixed an issue where the dialog to en/disable conditions would display an error when being closed with the 'x' in the top right corner
FIX	Fixed an issue where 'Modify Access Control in selected actions' did not work when removing more than 1 entry
